

[Continue](#)

While most of the drama has settled over Instagram shamelessly ripping off Snapchat Stories, you might still have strong opinions when it comes to how necessary the new feature is. But it looks like Instagram does have one more advantage (or just extra feature) over Snapchat, though small — Insta lets you browse from your desktop, and with a new Chrome plugin, you can watch Stories as you scroll through your feed from a web browser. Do you need it? No. But you can have it, and isn't that what the Internet is all about? You have to have Chrome installed as your browser in order to use the plugin, but it's free to download and the plugin is free to install. If you need yet another platform to keep up your social media prowess, here's how to install the Chrome IG Story plugin: 1. Follow this link to the Chrome Web Store and Click "Add to Chrome" in the upper right-hand corner. 2. Click "add extension" if you're cool with Chrome accessing your Instagram account. 3. From here, the extension will automatically start to download. The blue "Add to Chrome" button should now be green, indicating that your download is complete. 4. Go to Instagram.com to test out the plugin. Just like the Instagram app, you should now be able to see the Stories you follow appear at the top of your feed. 5. You can now watch Stories by clicking on them. Instead of swiping to the next Story, navigate by clicking arrows on the left and right of the screen. You can exit Stories by clicking anywhere outside of the bounds of the arrows. Windows 10 Performance and Productivity Scrolling through Instagram can be good inspiration for everything from selfie captions to fashion choices thanks to friends, family, and influencers with likable photos. You might even be that inspiration for someone else. Whether people view your profile out of nosiness or admiration, is it possible to see who views your Instagram profile? Can you see who views your Instagram profile? Instagram doesn't allow users to see who views their profile. So if you look through someone's profile and don't like or comment on a post, there's no way for them to know who sees the pictures. "Similar to Facebook, users are unable to see who has viewed their profiles regardless of the type of profile they own: personal, business, or creator," says Reggie Azevedo Filho, who works for the social media management platform Traject Social (here's how to block someone on Facebook Messenger, by the way). This goes for both users with accounts and people without accounts who use the web to browse Instagram publicly. Instagram Business accounts will display stats about the volume of traffic but doesn't show specific profile information, according to Alex Heid, Chief Research and Development Officer at SecurityScorecard. Business accounts specifically show the number of who people visited your profile in the past seven days, or how many people saw your posts in their feed, according to an Instagram representative. Here's what it means to restrict someone on Instagram. How to see who views your Instagram stories If you share more Instagram stories than posts, you'll have better luck finding out who's viewing your content. Users who view stories appear in a "viewers list" for 24 hours after the story is live for the original poster to see. "This grants you insights into the specific audience members who have viewed your photo, video, or story post for the same period of time your post is active," Azevedo says. After 24 hours, the list disappears, but if you save your stories, you can still see the number of people who saw them (and who). You must be logged in to see this information. By the way, here's how to see who unfollows you on Facebook. Is there a third-party app that lets me see who views my Instagram profile? Facebook acquired Instagram in 2012, so there's some overlap in privacy settings. So, like Facebook, no third-party apps will tell you who looks at your Instagram profile. "Anything advertising a feature that shows who viewed your profile would not be a legitimate service and should be avoided as it is likely just an app that is there to collect data for those who use it," Heid says. There's no indication that Instagram will ever decide to allow users to see who views their profile. Next, learn how to tell if someone blocked you on Instagram. Sources: SOPA Images/Getty Images rd.com, Getty Images Tero Vesalainen/Shutterstock Originally Published: July 13, 2021 You won't be able to see who's viewed your regular Instagram photo or video posts, but it's pretty easy to figure out how to see who's viewed your photo or video stories. These instructions apply to Instagram for Android, iOS, and iPadOS. Tap your profile picture bubble at the top of your feed to view your story. Look at the lower left corner of your story. If any of your followers have already viewed it, you'll see one or multiple profile picture bubbles with a seen-by label beneath it. If you don't see this indicator yet, tap the X in the top right corner to close the story and wait a little bit longer for your followers to view it. After waiting, repeat steps three and four. Tap the profile picture bubbles with the Seen by # label to open the view tab. You'll see a list of all the people who've viewed your story, along with the total view count in the top left. Tap the X in the top right when you're done. Tap any viewer's profile picture or name to go directly to their profile. You can also tap the three dots beside their name to hide the story so that person can't view it again or alternatively the mail icon beside their name to send a direct message. Customize your story's viewing and sharing settings by tapping the gear icon in the top left corner of the story. From here, you can configure the following options: Hide Story From: Select people from your followers list to hide this story from them. Close Friends: Create a list of close friends if you only want to share this story with specific people. Allow Message Replies: Allow your followers or only followers you follow back to reply to your story or turn replies off altogether. Allow Sharing: Allow your followers to share photos and videos from your story as messages. Customize your story settings any time you want, even when you don't currently have any live stories, from your account settings. Open your profile, tap the menu icon in the top right, tap Settings, scroll down to Privacy and Security and select Story Controls. Check your notifications by tapping the heart icon in the bottom menu after the 24-hour story expiration period. Upon expiration, you should receive an automatic notification tell you how many people viewed your story. Tap that notification to open the story's view tab to see who viewed it. Screenshot Increase the chances of your story being viewed by more of your followers by keeping it around longer than the default 24-hour period. To do this, all you need to do is set your story as a Highlight. Tap to view your story and then tap the Highlight button in the bottom right. Although it will disappear from your followers' feeds after the 24-hour period, it will remain on your profile until you remove it. Consider setting your Instagram profile to private if you don't want people who don't follow you to view your stories. As long as your profile is public, anyone can tap your profile picture to view your stories. Whenever you view someone else's story, that person can see that you viewed it. There's no way to view other people's stories anonymously, so if you don't want someone to know that you're viewing their stories, your only options are to either view it through somebody else's account or not view it at all.
