I lived with Android 7.0. I just want a watch that shows me two time zones. He worked perfectly on the old phone, I just had to set the second world clock and resize Widget, but there's no way to resize Widget anymore. There is a "double clock" option, but I don't want it to be an analog clock. I've been doing research for half an hour, all I can think of, "Hold on Widget and let it, you'll see the size of white frames change", but no, no. I do not know what to do. Use our partners. In addition, with the proposed identification information, the question and answer written in the meantime uses the Java. As of March 2014, the Modern API Date Clock Time was published as part of the Java 8 standard. The library replaces the Old History Monitoring API and has been strongly recommended to switch to Java.time, the Modern Monitoring API since then. Java time with the temporary solution do not use the three-letter time zone identities: Before you do this with the Modern History API, see the following important note in the Java 7-hour period documents: JDK 1.1.X, other three-way-Cleters-zone identities (for compatibility with (It is also supported like "PST", "CTT", "subordinate"). However, the same abbreviation was generally used for multiple time periods (eg Cst "US" central standard clock "and" China standard clock ")))))))))))) full = 1#post6438522 I had on PP phone. I just want to have a watch that shows me two time zones. It worked perfectly on the old phone. I just had to set the second world time and change the widget size, but now it's impossible to change the widget size. There is a "Dual Clock" option, but I don't want it to be an analog clock. I've been looking into it for half an hour, just found "Keep the widget and relax, you'll see white borders to change the size", but no, I don't see it. I don't know what to do. 2019-07-01 03:38 PM as 0 . It is used to save and/or access information in the device. Continue the cookies recommended at this time. In March 2014, a modern date API was released as part of the Java 8 Standard Library, which replaced the old date API and was strongly recommended for the modern API for Javatime.pass. Workaround with Java.time Don't use the three letter timezone ID: Before we do this with the modern API for date and time, let's review the following important note from the Java 7 timezone documentation: For compatibility with JDK 1.1 . x Some others are supported by timezone (such as "PST", "CTT", "AST"). However, they are obsolete because the same abbreviation is often used for different time zones (e.g. "CST" can be American "standard time" "Central Central" and "Standard Time"),))The Java platform can then recognize one of them. Desired solution: Inside java.time.instant; import Java.Time.zoneid; import java.util.concurrent.timeunit; class main { public static void main(string[] args) { moment now = moment.now(); Long hunger1Insec = zoneid.of("america/new_york"). Trules (). foffset(now).gettotalSeconds(); } } Now disabled*: Online demo 5 is the difference with GMT/UTC that is needed. The solution above is a general solution for all time zones. However, if the desired difference is from GMT/UTC, it becomes even easier. In this case you do not need to calculate the difference as the compensation for the period is always W.R.T. Offset 00:00 UTC. Demo: import java.time.instant; import Java.Time.ZoneedDime; import Java.util.concurrent.timeunit; class Main { public static void Main(string[] args) { long hours = Math.abs(Timeunit.hours.convert(regionalId.of("America/new_york"), timeunit)); System.out.println(clock); // alternate hours = Math.abs(Timeunit.Hours.Convert(zoneeddamtime.now(regional("US/new_york"). You'll find out. You can find more information on this page. Now I'm traveling with my phone and the lock screen shows a double a clock with circulation and a house clock. It's very useful! The house clock is not really the time I live in. But the time I recorded the time outside - I've been wearing time zones since I bought it. There is a way to stop the house where I really live , time zone and store two clocks? Can you edit the region and adding clocks for other cities, open the Telephone Watch app that shows the time. Put other settings to choose home time zone: tapAutomatically updates the time zone: touch the modification date and the time zone should be determined. To update time zone based on location: Touch date, change date and time to set time zone, and automatically use location to set time zone. To add a watch to home, go to another time zone: tap on automatic watch to home. Change alarm settings open the phone app. Tap more settings. Under "Alarm": Choose how long it calls alarms: hits silence later. Choose how long "DND" delays the alarm: tap DND duration. Change the alarm volume: use the "Alarm volume" slider. Over time, we get louder: touch gradually increases the volume. Choose what the volume buttons do: press the volume buttons. They can control volume, sly anxiety, or deny anxiety. Choose the day the week starts: Tocca starts the week. Change the timer settings open the phone app. Tap more settings. In the "timer" section: choose a call that rings when the timer ends: the timer sound. Over time, the timer sounds louder, gradually hitting the volume. Provide clock vibrations: TIM timer vibration. Add watches to other cities, open the phone clock app. Touch the clock. Added bottom faucet. Enter the city name in the search bar, then touch the city you want to add. Cory City: Touch and hold the city, then drag it up or down the list. Remove Town: Move to the left or right you want to remove. Ask the community for help, get answers from community experts, you can change watch settings including date, time and time zone. It is possible to set alarms and time counters and add watches to other cities. Change the time displays, open the phone clock app. Tap more settings. To select a home time zone: Touch your home time zone. To automatically update the time zone: Touch the date, change date and time to automatically set the time zone. To update time zone based on location: Touch date, change date and time to set time zone, and automatically use location to set time zone. To add a watch to home, go to another time zone: tap on automatic watch to home. Change alarm settings open the phone app. Tap more settings. Under "Alarm": Choose how long it calls alarms: hits silence later. Choose how long "DND" delays the alarm: tap DND duration. Change the alarm volume: use the "Alarm volume" slider. Over time, we get louder: touch gradually increases the volume. Choose what the volume buttons do press the volume buttons. They can control volume, anxiety or denialChoose the day of your week: Tap the week. Change the timer settings to open the Clock app on your phone. Click on the following settings.
