Best gallery app to hide photos. Best photo hiding apps for android. Best hidden photo app.

Smartphones are easily accessible to children. Although these devices are very useful for them, they are not safe in the online world. The Internet puts children, especially teenagers, at risk online. To keep your kids safe, you need the best hidden spy apps for Android. Because Android owns 80% of the total market share. Many people spend a lot of time on chats, social networks and phone calls. To track all activities, you need a great app that can track call logs, chats and social media. By observing all these things, you get the right idea about your child's activities. In this article, we present the top 10 hidden spy apps for Android: 10 Best Hidden Spy Apps for Android Firstly, many people search for spy apps every day. Most of them are looking for hidden spy apps for android for free. We warn you not to use free apps. Why? First of all, free apps do not provide enough options for spying on target phones. Second, they are not safe. Downloading such applications not only wastes your time but also damages your system. Instead of spying on someone else, you lose your valuable data. You need to spend some dollars to buy safe apps. These apps not only save but also provide better spying features. Let's talk about the top 10 spy apps: Part 1: TTSPYTTSPY Spy App DashboardTTSPY is the most powerful app that stands out among all the spy apps. This reliable app can control any device like Android and iOS. The application has many amazing features. First of all, this app does not require you to root both your phone and the target Android device. Imagine what features you want to follow? Camera spying? Call about spying? Spy on text messages and social networks? This app gives you everything you can imagine. Does it seem like overkill? Normal? Head over to the official TTSPY website and check out all its features! TTSPY Stealth Mode The application works in stealth mode, i.e. no app can detect its activity. So you can use it to monitor mobile phone remotely. You only need to access the target mobile device once to install this app. Installing this application takes only a few

When installed, the user will never be able to find the app. Because it does not take up much storage space. In addition, the app silently monitors mobile phones in the background. It also does not drain the cell phone battery. Therefore, the person affected by the attack will never suspect that something is happening with the smartphone. What can TTSPY spy on? TTSPY offers 25+ amazing features. Each feature plays an important role in espionage. You can spy many things on the target phone: Call Spy This amazing app monitors all incoming and outgoing calls. So you can check all call details including call duration, contact details etc. The app allows you to record calls if you want. TTSPY live cam streaming app stands out from all apps with this feature. With this feature, you can live stream the front and rear cameras to see the actions of the target person live. Also, this app will help you live stream your smartphone screen. This allows you to see what is happening on the screen in real time. This app makes it even easier to take screenshots or photos. Spying on Social Media Most people want to monitor their children's activities on social networks. Children spend a lot of time on social networks. This app helps you to spy on almost all social media platforms like Facebook, Instagram and WhatsApp. You can read all conversations on these platforms.KeyloggerKeylogger is another prominent feature of the TTSPY app. This is one of my favorite features. Because this function keeps track of all keystrokes pressed by the user. It may contain passwords, usernames and other information. So, you can consider this app as a hack tool. Location Tracking You're sitting at home and don't know where your kids are. How you doin? This app will help you with thatuser location in real time. This application also saves all user history. Part 2: XNSPYXnspsy Overview XNSPY is another famous spy app. This application works in stealth mode, similar to the TTSPY application. No application can say it works. In addition, this application offers many useful features. For example, if a user deletes some texts after reading them, you can still read them. Because this application manages the backup. Pros The application manages the backup of deleted data. It has a very user-friendly interface. Cons This application does not support desktop monitoring. You cannot live stream from cameras like TTSPY. Part 3: CocospyCocospy Review Cocospy is included in the top 10 hidden spy apps for Android for many reasons. This app is a great work of the world's brightest minds. Millions of people use this spy app to spy on their children and employees. This application offers many useful features. For example, you can track your entire call and text history. You can also check activity on social media apps like Facebook and Instagram. Pros This application works in stealth mode, which makes it inconspicuous. It is not necessary to root the target device to download it. Cons: The app is a bit expensive. Compare features with other applications. Part 4: OnespyOnespy Review Onespy is one of the best hidden spy camera apps for Android. It has some basic features to monitor your kids and employees. That said, if you're looking for a simple spy app, this app might be one of your best options. This app offers some basic spy features like tracking location, text messages and calls. Also, this incredible app is not as secretive as TTSPY. The pricing plan of this app is extravagant because you don't get anything unique in this app. Pros This app has several key features that make it easy to use. Minuses. For some of its features to work properly, your device needs to be rooted, this app is not 100%5: Stealthgenie This is a decent spy app to keep track of your kids, spouse and employees. The application includes the most popular spy features. For example, you can check complete call logs and message history. It also allows you to check contact information, email, etc. The user interface of this application is very simple. So anyone can use this application without any prior IT knowledge without any problem. Here are some pros and cons of this app: Pros The app has a very user friendly interface, just like the TTSPY app. Customer service is good. Disadvantages Installing this application requires a rather complicated installation process. You must be logged in for at least a full year. Part 6: Guestpy This app is a great app for keeping track of your internet activity. Some amazing features have made their place in the best hidden spy apps for android 2020 list. For example, this app can hear your mobile phone's surroundings. After successful installation, this application sends all data to the remote server. You can then see all the information on your device with Internet access. ProsGuestspy is available for Android and iPhone devices. It has a well-managed toolbar for easy interaction. Disadvantages Tariff plan is unevenly distributed. Part 7: Mobile Spy/This is a reliable spy app that effectively tracks android devices. This app belongs to the category of hidden spy apps for android without root. This application contains many useful features. For example, you can track location, messages, and call logs remotely. It allows you to track activities on social networks such as Facebook and WhatsApp. ProsThis app helps you track the location of target users in real time. Works in stealth mode. Does not support Windows and iOS devices. Part 8: SpycamSpycam This app review will help track minors. So all the features of this app cover this aspect. It's better to call it a restrictive app than a spy app. Thus, you can block access to certain applications and websites.The application does not require root to work. This application has a user-friendly interface. Cons The app does not include advanced features like the TTSPY app. Part 9: Hellospy This is one of the famous hidden spy apps for android without root. You can use it to monitor text messages, social media chats, and call logs. The app works similarly to other Android trackers. The main drawback of this app is its old-fashioned layout. The layout of this app is very dull and boring. ProsHellospy has been developed for both iOS and Android devices. The installation process is very simple and clear. Cons: The UI feels too dated which makes this app boring to use. hits the list of top 10 hidden spy apps for android 2020. It offers many useful features to keep an eye on your children's activities. For example, you can track WhatsApp, call logs, browsing history, etc. The app is quite difficult to install. However, they do provide online help to install this app. In contrast, I opt for a simple and easy installation. Benefits. This app has all the spy features you need to keep an eye on your kids or employees. minuses. This app requires your device to be rooted. The installation process is complicated. Android apps for free. We advise against using free apps. Instead of benefits, you lose valuable data and information. Because other people will spy on you. You have learned the top 10 hidden spy apps for Android. So you have learned about hidden spy apps for android 2020. You can choose one of them that suits you best. If you're looking for hidden spy camera apps for Android, TTSPY is for you. The TTSPY app offers many unique and amazing features for a reasonable price. Our private life is now tied to the smartphone we carry in our pocket. We take lots of photos and videos that you can keep to yourself. However, it's possible that your phone doesbecome a victim of someone, or you can simply pass it on to a friend who is unaware of his true intentions. If you are an Android user, you can use the TTSPY app to spy on your kids and employees. We have compiled a list of the 12 best photo and video hiding apps for Android. Best Apps to Hide Photos and Videos for Android (2022) Here are the best apps you can use to hide photos and videos on Android. You can view the full list by clicking on the table of contents below. Click on the app's name to move its location within the article. 1. Google Photos (Locked Folder) While there are many third-party apps you can use and we have mentioned many of them below, I personally think that Google Photos is the best way to protect your private photos and videos. The app has a useful "Locked Folder" utility that you can use to protect any private images you want to hide. When you hide photos in a locked folder, they are automatically removed from your regular Google Photos library so you don't have to do it manually. In addition, photos can only be viewed after authentication with a fingerprint or pattern. Also, Google Photos doesn't back up the photos you save in a locked folder, and doesn't even let anyone take a screenshot of the contents of a locked folder for added security. Download: (Free, usually preinstalled on Android phones) 2. KeepSafe Photo Vault If you've used an Android app to hide your private photos or videos, you've probably heard of KeepSafe Photo Vault. It has been around for a while and is still one of the best apps for protecting your media files from others. The app has undergone massive updates over the years, making it cleaner and easier to use for everyone. It allows you to lock photos and videos with PIN, pattern and fingerprint authentication options and publish them to display a cluttered and categorized folder grid. You can jump to anythese folders to add and protect your private photos, videos or personal identifiers. You can create your own folders, share them with other KeepSafe users, and back them up to their private clouds. KeepSafe offers many advanced security features such as fake login PINs, intrusion alerts (where the intruder's selfie is recorded along with the time and date of failed attempts), and Secret Door hides apps with a different user interface. But all features are hidden behind a paywall and I recommend it if you really want to protect your personal media. Key Features: Easy-to-use PIN, pattern, and fingerprint authentication Private cloud storage Downloads (free in-app purchases) 3. IGallery IGallery is a photo and video management app with a photo gallery. However, the main feature of this gallery app is its iron vault that hides photos and videos with strong encryption. There are many apps on the Play Store that allow you to hide photos and videos, but they only use the nomedia extension to prevent media files from being scanned. But if you use IGallery to hide photos and videos, nobody can find your media - even with superuser rights. There are three password modes including PIN, pattern and fingerprint to hide your photos and videos. That being said, the reason I'm mentioning this app so high on this list is because of its beautiful interface. The app has been impeccably designed and has a modern look thanks to a fresh approach to design and user experience. In terms of features, it also has a dark mode, support for various file formats such as RAW and SVG, search management, video and can also be used as a photo editor for Android. All in all, if you are looking for the best app to hide photos and videos, I recommend IGallery for its encrypted storage, beautiful design, and comprehensive approach. Key Features: Encrypted vault. Hide Photos with PIN, Pattern & MoreGallery AppEasy to UseDark Mode Download: (Free In-App Purchases) 4. LockMyPix Photo Vault This has been my favorite choice by many to protect my photos and videos from prying onlookers. This aptly named app called LockMyPix is designed to provide the most secure photo storage to protect all your personal media files. Supported by the AES military encryption standard, it allows you to hide your photos with a PIN or pattern. It has an intuitive interface that allows you to encrypt photos/videos right from the app's home screen. You can even click images instantly and add them to your vault in no time. Additional features include unlocking apps with your fingerprint, shaking your device to lock your vault, and even hiding LockMyPix in your app drawer. Luckily, you can't take a screenshot of the app when it's unlocked, which now also increases the privacy and security of your content. While the free version offers a range of features, the pro version also gives you the option to set up fake credentials. This feature comes in handy when someone insists on unlocking an app, but you can give them access to a second vault with a fake PIN. The only downside of this app is that you cannot back up private photos/videos to the cloud. Key Features: AES encryption No screenshots Hide photos and videos with a PIN or pattern Download the app (free, \$1.99 per upgrade), but there's a secure vault at the core of the app. Basically, if your friends and family use your smartphone regularly, you can use the Calculator app to hide photos and videos without giving the impression that you're hiding anything. You can set a numeric PIN to enter into the calculator and press â=â to open the secret vault. And the best part is that your media content is encryptedAES encryption This also keeps you well organized in terms of security. In terms of features, you have something called Intruder Selfie, which allows the app to take selfies of users trying to gain access to a secret vault. In addition, you can also create a fake safe if someone forces you to open a secret safe. Another cool feature you get with this app is that you can shake your smartphone to quickly close the app and hide your photos and videos. Overall, the FishingNet calculator is packed with features to help you hide your photos and videos from prying eyes. Key Features: AES EncryptionFake VaultIntruder SelfieShake to close app and hide photos Download: (Free, offers in-app purchases) 6. Hide pictures and videos Vaulty Vaulty is another well-known and trusted photo/video hiding app. It might look a little dated, but it works great. You can simply go to the app, select the media files you want to hide from the gallery and password protect them from the outside world. Vaulty's main feature is that it catches intruders who try to get into your vault but don't enter the correct password. You will instantly know who tried to invade your private space as soon as you unlock the app. This feature is available to all users for free, which is definitely a plus. You can also create multiple vaults with separate passwords to store different types of photos or videos in each one. However, if you want to back up your files to the cloud or remove ads from the app, you'll need to upgrade to a Premier subscription. Key Features: Multiple Vaults Intruder - Mug Shots - Hide photos directly from the gallery app Download (free, upgrade to Vaulty Premier for \$9.99/month) the most convenient photo and video hiding app on your Android device. You can protect photos and videos with a PIN code, or fingerprint. Uploading new photos or videos to the "invisible" folder is as easy as sharing a file in Hide Something. You also get access to a small collection of beautiful themes, support for various media file types, an advanced image viewer, and a fake login mode to further protect your privacy. Hiding something is also special in that it's not detected, so it doesn't appear in the "recently used" list. But the feature that wins me over is that the app backs up all your private media files to Google Drive and lets you view them in a browser on your computer. This simplifies the process of viewing and accessing photos or videos for the end user. Key features: Protect photos with PIN, password and fingerprint. It does not appear in the list of recent applications. Fake Login Mode Download (Free, Get a Premium License for \$2.99) 8. Google Files (Secure Folder) Unlike most of the apps on this list, Google Files is not a full Vault app. However, Google recently added a handy secure folder to help you hide sensitive documents, images, videos and audio files. You can find the secure folder in the Collections section of the Browse tab. You can store confidential files securely by setting a 4-digit PIN code. Note, however, that you don't have a password reset mechanism in case you forget your PIN. If you're interested, be sure to check out our dedicated guide to enabling and using Google Secure Folder files. Key features: Built-in Google files. Hide sensitive photos and videos with a PIN Download (Free) 9. Sgallery Sgallery is another powerful Vault app that you should try if you want to hide your pictures and videos. The application uses the AES encryption algorithm to encrypt files. With the premium subscription, you also get additional features including fingerprint unlock, shake to close, selfie hack, fake password, time stamp and custom wallpaper. Another decent oneSgallery is that you can disguise it as a calculator or converter. This way, others won't know if you have hidden files. You also get a built-in web browser and notepad for secure viewing and saving of texts. The app also asks you a password reset question in case you forget your password in the future, which is a great addition that can come in handy. Key Features: AESPattern Encryption, PIN Code, Fingerprint Lock Options Dark Mode Intruder Selfie Upload: (Free, offers in-app purchases) privacy app. This allows you to hide your photos, videos and other files behind strong layers of military-grade AES encryption and save files to the cloud to free up space on your device. The free version of this app only allows you to hide apps in one vault, but you can purchase the PRO version to create multiple private vaults, access vaults via cloud backups on multiple devices, and access more features. It also removes the annoying ads that bother me almost instantly. By unlocking the PRO version of the app, you get a fake safe, an invisible icon, a fake force lock and a custom theme. But what impressed me the most was the simplified interface of this application. Key Features: Download AES Cloud Encryption (Free in-app purchases start at \$0.99) 11. PhotoGuard PhotoGuard is another app you can use to hide photos and videos on your Android device. It comes with AES encryption instead of TKIP and your media files are safe and cannot be hacked to open the vault. In addition, PhotoGuard offers cloud backup and claims to always support encryption - whether on your device or in the cloud. In addition, you can protect your photos and videos with a PIN, pattern, password or fingerprint. And the nicest thing you can addan additional layer of security in storage. For example, you can set a password for vault albums, which is great. In addition, PhotoGuard offers a burglar alarm that takes a photo of the intruder and records the time so you can find him. Storage also has a built-in photo viewer and video player that supports a long list of file formats. Obviously, this is not a very rich video player, but if you are looking for one, you should check out our article on the best video players for Android. Plus, you get a private camera to take photos and store them in vaults that other gallery apps don't have access to. Simply put, PhotoGuard is one of the best apps for hiding photos and videos, and you should definitely check out its features. Key Features: 256-bit AES encryption. Hide photos and videos with PIN, pattern, password and fingerprint. Hack Alerts Private Camera Download: (Free, offers in-app purchases) 12. Pinbox Another app to hide photos and videos on your Android phone is Pinbox. With this application, you can easily and safely hide your personal and private photos and videos from prying eyes. You can simply select the photos you want to hide and save them to a pinbox. The app supports fingerprint and PIN to unlock your secure gallery. It also has an intrusion detection feature so you can see if someone is trying to access your hidden photos without your knowledge or consent. Pinbox encrypts hidden photos using the AES algorithm, so you can be sure that your photos and videos are safe. Download: (Free, offers in-app purchases) Native apps to hide photos and videos on Android ROM. There are many apps available in the Play Store with a wide range of features and functions to hide photos and videos. Recently, however, smartphone manufacturers have begun to integrate these features directly into the operating system. So you don't need to use third party apps fromTo keep. In this section, we introduce some apps and methods for popular Android skins like OneUI, MIUI, ColorOS and more. so please Samsung (OneUI) There are many great features in OneUI and Samsung has what they call a secure folder, which is an encrypted place where you can store all your photos, videos and files. It uses the Samsung Knox hardware security platform to keep your data safe, making the protection this feature offers top-notch. First you need to set up a Secure Folder under Settings -> Biometrics and Security -> Secure Folder. Set a PIN here and explore other options. Then open the Samsung Gallery app, select your photo and move it to a safe folder. Everything is ready. Xiaomi (MIUI) On Xiaomi smartphones with MIUI, you can hide photos and videos using the native file manager app. Just select your media, tap the three-dot menu, and then choose Hide. You'll be prompted to set a PIN or password and you're done. If you want to access these media files, you can access them through the "Hidden files" section of the file manager after successful authentication. Realme (ColorOS) Like Samsung, Realme has a "Private Safe" that comes with ColorOS and is one of the most useful features of ColorOS. You can enable it in Settings -> Security -> Private Safe. Now you can move your photos and videos or any other files to your personal safe. It will be available in a separate folder on the home screen or launcher. OnePlus (OxygenOS) On OxygenOS you can enable "Lockbox" in your own file manager. You can set a PIN and transfer media files, including photos and videos, to Lockbox. Note, however, that it doesn't use encryption like Samsung devices. Best Apps to Hide Photos and Videos on Android Well, here you will learn how to hide photos on Android using third-party apps as well as solutions developed by Google. We've also included some methods you can use in Android user interfaces like OneUI.and more. Hopefully at least one of these methods will suit your needs. Which app are you considering to protect your secret photos? Let us know in the comments. By the way, if you have private files on your computer, you may also want to lock files and folders in Windows. OK Good.
