Following traditional exercise, both the magnitude and timecourse of these beneficial responses are different between obese compared to normal weight individuals. Although obesity may affect the ability to engage in traditional exercise, whole body vibration WBV has emerged as a more tolerable form of exercise. The impact of WBV on immune, metabolic, and myokine responses as well as differences between normal weight and obese individuals, however, is unknown. Purpose To determine if WBV elicits differential magnitudes and timecourses of immune, metabolic, and myokine responses between obese and normal weight individuals. Blood samples were collected preWBV PRE, immediately POST, 3h 3H, and 24h 24H postWBV and analyzed for leukocytes, insulin, glucose, and myokines IL6, decorin, myostatin. Published by Elsevier Inc.
