Book Descriptions:

Dewalt Dw733 Planer Manual

It comes with two resharpenable blades, while its successor, the DW734, uses three disposable blades instead. The dust port is made from plastic and bolted onto the machine. Due to its design wood chips often clog up in the left part, meaning you have to completely unscrew it again to clean it. On the bigger DW735, DeWalt actually added a blower to spit the chips out so they can't get stuck. Add it here We have the answers. Gives a good first impression of the machine. He even makes a clever jig for sharpening the blades. Shows how to replace bearings and plates. The 734 uses three disposable blades, while the 733 uses two resharpenable blades. On most machines I know those will have quite different shapes different slots to secure them. So it is unlikely that they can be used on both machines. Let us know through this form. Stairman 5.0 out of 5 stars One part, the backing, of a tough durable steel and the knife edge made from high speed Steel to hold the edge so necessary to the blades performance. Not only are they some of the toughest knives for the price, they can be resharpened unlike the subsequent planer

models that use not so cheap disposable blades. The DW733 is probably the best value thickness planer and DW did it right. I just wish they had taken the good from the DW733 and improved upon it rather than making the replacement models they have come up with and are currently marketing. With these new blades, the planer cuts smoother and labors much less than with the old blades. The difference is amazing. Now I have a spare set so I can always have sharp blades in reserve. I would definitely recommend these blades to others. The new knives cut so much better. I won't wait so long to replace them again. I've run an awful lot of wood through my old DeWalt. Maple, elm, walnut. These blades come through plenty sharp and hold up well. By having extras on hand I just send them out for sharpening once in a while. I sharpen my own jointer blades usually, but I find it a lot easier to send out planer blades, especially if I have a saw blade or two needing sharpening as well.

0 out of 5 stars I contacted the seller who offered to send me a replacement, which they did priority and the only reason I'm not leaving a one-star review. When I opened the new blades I could already tell they were totally different. The grind was completely different, and the metal itself was several shades darker. So I installed those and got to cutting. Unfortunately after about 5 boards one of these two new blades was already chipped as well and leaving streaks across the lumber. Prognosis Cheap low-quality metal. The wood was standard kiln-dried Douglas fir straight from the lumber supplier, pretty soft as is. Unfortunately the blades seem to slide in too far for the magnet guides. Of course I didn't notice the first time I installed them and soon realized what happened during a test. After reinstalling them by tightening the bolts a bit before using the magnetic guides, everything went together as it should. Test pieces of birch worked great. Hope they hold up over time. Had 60 BF of white oak to finish for a project and old blades needed sharpening. These blades fit perfectly and left an awesome smooth surface on the wood far smoother than I could have gotten through sanding. They already need sharpening but I think that is a function of running so much hardwood through them. I use a lot of reclaimed wood and have been known for sometimes missing a piece of embedded metal. So cost is important to me. I have used a couple of sets until they were just worn out and they seem to last as long as the more expensive blades. After the first few boards mahogany, there were raised lines from where the edge chipped. Not worth the effort of even installing. I should have bought the OEM Dewalt ones. Live and learn, I guess. Not too happy to have to sharpen

one knife after barely using it. To sharpen them properly yourself you need some sort of jig for your grinder, so for best results we decided to just replace the blades.

The planer is much happier and cuts through redwood decking with ease using the new blades. They fit great, and initially a good edge. However, after only a few weeks of light use, they started to chip. Can also be sharpened several times which is a huge bonus! I have just bought replacement knives for my General jointer. Will buy again when need arises. To start viewing messages, They also have the parts breakdowns and you can order parts there if needed. Very handy. Mikie. Please try again I ordered the blades on Friday and they arrived on Sunday. I began installing the blades Sunday evening and the inner bolts would not go in. There was no way the inner bolts would line up. I contacted the company and Amazon, which is where I was given no hassle and returned the blades to which I received the new blades today. The new blades matched up perfectly and work great. Hopefully time will tell how well the blades will hold up in the long run compared to the Dewalt blades. Sorry, we failed to record your vote.
