If the dimmer has been powered up for MORE THAN 15 MINUTES see A2 below.

http://www.philipsong.com/images/Dell-Poweredge-830-User-Manual.pdf

This indicates that the dimmer is now in Setup Mode Go to the relevant setup function instructions This indicates that the dimmer is now in Setup Mode Go to the relevant setup function instructions However, some lamps can become unstable at low dimming levels, in particular CFL's. The setting is automatically saved to all other devices connected in parallel Therefore, when setting up maximum brightness, it is recommended that the lamp is slowly dimmed up to a point where no further changes in brightness can be seen, and the maximum level set at this point. These lamps require the dimmer output to be set to 50% for 0.2 of a second when the lamp is turned on. This ensures the lamp strikes successfully.To enable Kick Start Mode, follow the steps below. Note this also applies where two way switching operation is required. This is covered in Step 4 below. It turns back on to level set in step 4 above. If the dimmer has been powered up for MORE THAN 15 MINUTES see A2 below. This indicates that the dimmer is now in Setup Mode Go to the relevant setup function instructions This indicates that the dimmer is now in Setup Mode Go to the relevant setup function instructions However, some lamps can become unstable at low dimming levels, in particular CFL's. The setting is automatically saved to all other devices connected in parallel Therefore, when setting up maximum brightness, it is recommended that the lamp is slowly dimmed up to a point where no further changes in brightness can be seen, and the maximum level set at this point. These lamps require the dimmer output to be set to 50% for 0.2 of a second when the lamp is turned on. This ensures the lamp strikes successfully.To enable Kick Start Mode, follow the steps below. By default, the white LED indicators are set to glow on when the dimmer is turned off. This can be useful as a nightlight. To set the LED indicators to turn off when the dimmer is off, follow the steps below.

http://ersanteknoloji.com/images/Dell-Poweredge-750-User-Manual.pdf

However, some lamps for example, nondimmable CFL's can flicker when switched OFF by pressing the dimmer's push button. Note this also applies where two way switching operation is required. When used in the Separate Switch Mode, the dimmer turnon level needs to be set. This is covered in step 4 below. By default, the memory dimmer option is disabled. Then, by default, when the connected lights are off and the button is tapped, the lights will switch on at maximum brightness. However, pushing and holding the button when the connected lights are off will dim the lights up from the minimum level. To enable or disable the memory dimmer function, follow the steps below. Program It s a program that enables you watch and control the site DVR. Therefore, you don t need

a DVR to watch site DVR s image.DigiNet Center Program User manual Web DigiNet Manual. Web DigiNet Setup.80. Web DigiNet installation Web DigiNet Connection setup.84 Then doubleclick on folder.DigiNet check the password when it starts. It doesn t have a password as a default. Password setup window. Caution It is impossible to change password when you forgot it. Please write it down on other place. We recommend that the administrator to change password. Refer to page 7 for password change. Applicable storing media. You can only record in network drive and in drives which can support the following; Hard disk or remote drive DVDRAM, ZIP, MOD, ORB, USB HDD etc.. Click this on the initial screen. Execute KPPPSetup.exe. You need to reboot the system when the PPP setup is done. After you finish the installation of modem, click KPPPSetup.exe in DigiNet folder of DVR and PC. This program may not work properly when the system doesn t have a modem installed. Any window of Network properties or dialup server properties should not be open before executing KPPPSetup.exe Do not execute KPPPSetup.exe twice at one instant. You should wait until you see a message that your system will reboot.

On DigiNet communication setup of site software select LAN. Please check after installation if the connection works well between center and site. In that case please follow this step. When the ISDN modem supports a few dialup servers you should select a proper dialup server that supports ISDN among the dialup servers. Choose PPP Internet, Windows NT server, Windows 98 on Server Type. Check Enable Software Compression and Require Encrypted Password and click Apply button and OK. From Modem register information window, Select for maximum speed if PSTN Select 500 for maximum speed if ISDN For safety of communication line, modem for center and site should be set to equal. Connection may not work well if something like noise and old line etc. This button plays the current image.! Below message will appear if you didn t select the camera. Designated number is not the number of image but it is an internal value for the DigiNet program. Basically zooming a small image gets a little bit distorted image. But DigiNet System has developed own compression engine code KEngine CODEC to minimize this problem. Zooming in and out is applicable to only one camera. Then Data Backup window will appear. Then below watermark checker copy window will appear. If you click Yes for the selected image, Watermark check program will backup to a Floppy Diskette. You can backup the single images as many as you want on a floppy disk, however, you only need to store the watermark check program once. The image will be copied onto Floppy diskette in BMP or JPG format. The image will be copied with the watermark checker program to check to see whether the image was illegally modified or not. 34 Using Using watermark watermark checking checking program program Run the watermark check program by running the file WMChecker.exe on the floppy disk. If you click File Open button, below widow will appear to check authentication of the image. 35 Once opened the name of the file will appear in the window.

Select Watermark check to verify the image. Once verification has been completed windows similar to those below will appear. Therefore, you can not check the data using the normal image so you have to use it with the software from the place you bought it from. This is used when you select CD to backup data. If CD was not formatted, use Direct CD program for CD formatting process. Time has to be setup before the current time. Wait until the processing work is done; start the backup after current backup and waiting data have finished their backup. Approximate time to format CDR min, CDRW 545 min When the CD is formatted, follow the same instructions to HDD or removable drive DVDRAM, ZIP, MOD, ORG etc to backup your data. To activate GoTo function you need to click, then setup button will look like this. You can attach external sensors from 8 to 6. If the related external sensor starts working, connected camera starts recording. Input the sensor number you wish to use Sensor number that s related with each camera. If there are a few cameras, you can separate by comma. This is not required on motion detection mode. From Recording Schedule tap, record setting must be under Motion Detection mode for inputted specific camera number. If it is set on Continuous recording, this function is not activated. Input camera number of related camera that will detect and record related motion at the same time. Speaker that is located inside the system will

let you know site s situation by the sound. Ex Siren, lamp, or alarming lamp.Beep sound will not operate. Screen quality improves as you set to higher value but file size per screen frame will increase. Default value is Normal. Enter camera number. Rotation time should be set.! Caution Be careful not to set above value as 0 second. If you need to set minutes too, double click on corresponding time and you will see a picture that looks just like below. Drag either to left or right.

After choosing day and time from selected camera, selecting more than record mode will change selected time setup within selected time. Sensor setup can be done by camera and use time. If sensor is captured within selected time, related camera s image will be recorded or related control will operate. Sensor input signal will be ignored if anything occurs outside the setup time. If the corresponding camera or time is set to Continuous Record, you cannot use Pre Alarm function. View more Table of Contents Table of Contents Software Installation.
