DIPLOMAT ADP 8322 DISHWASHER FAULT!!! RECENTLY MY DIPLOMAT ADP 8322 DISHWASHER HAS STARTED BEEPING 5 MINS INTO A WASH CYCLE AND WHEN I OPEN THE DOOR THE RINSE CYCLE LIGHT IS ON!!! ANY IDEAS BOYS THE DON September 2007 FA is flashing on my panel. Julie December 2016 My dishwasher of this type starts but stops 1 minute later. No lights out no flashing just stops. Jimbo March 2016 FA is flashing on my panel. Mark March 2016 Followed instructions for removing side panel checking psb and small plug machine now working tried it three times before putting back together easy job. Thankyou Sylvia January 2015 Making much more noise than it used to and the tablet is always found intact in the cutlery basket and the contents of the dishwasher still dirty. Thomas January 2013 Mine stopped working. No lights were on thought it was the fuse. Took the machine outside tipped it on its back. Found blue wire at bottom of door had split. Joined back together with crimp connector. Now working fine. Andy Lund September 2012 Hi, my diplomat dishwasher has stopped working there are no lights on door and there is still water in the bottom. HELP what do i do. Nigel from Bedford August 2012 machine has stopped working. The power light has gone off.

I have changed the fuse in the wall switch. What could be the problem. Trev August 2011 Any help available for a diplomat add 8322 that clicks off house rcd after 20 mins of working fine. GraF July 2011 Ive read a bit about problems like this and managed to fix my ADP8322. First check how many times the light is flashing. In my case it was flashing 6 times. Apparently this indicates a filling fault. After searching around quite a bit and asking for professional paid advice via justanswer.com paid for service for reasonable price 11 in my case I found that it was a problem with a small circuit board also known as a PCB printed circuit board which has a micro reed switch part of the flowmeter. How it works is once water comes through into the machine and spins a wheel, this then has some affect on the reed switch I think it opens it. This tells the machine that water is flowing into the dishwasher. This PCB is found on the left hand side of the machine under the casing. Getting the casing open is not so hard. In order to do do this, you will need a special tool which you can buy from most hardware stores. Very much like an Allan key on a screwdriver. It is called a Torx and the size you will need is TT15. There are about 8 torx screws to remove. Once you have the side off, you will see a big plastic container where the water comes in. On the bottom of this is a connection and the PCB in question. You can remove the PCB altogether without damaging it if you pull it out gently with some needle nose tweezers. On this connection the contact between the PCB and the plug is probably dirty and you need to clean this. I scratched the circuit board connections with a screwdriver and then scratched the plug connections. I then bent the plug connections down so that it would have a better contact with the PCB. I thought I had done this fine the first two times and was about to give up when I tried tweaking the plug connectors even more.
