A kamera sokaig hasznalaton kívül volt, mostanában elöveve a fenymeres nem működik, szabadban tül exponált felveteleket készít, szabadban elfogadható. Segítsegetek előre is köszönöm Now I am trying to search a replacement screen. The part number of the LCD is LTA035D050A. I've already enquired utsources.com and invertercentral.com but the LCD is nowhere in stock. I have already found out that it's probably produced by Toshiba. The A in LTA perhaps stands for Automotive just a guess!. The 035 stand for 3.5 inches. Does anyone have an idea where to obtain this part Thank you very much! Alex Panasonic mini DV kamera paralecsapodás hiba megoldva Udvozletem a Tanyasoknak!

<http://www.familyreunionapp.com/family/events/boss-ml-2-manual>

Adva vagyok egy Panasonic NVDS65EG digitális video kamera. Precízen muanyag pufi foliába betekerve az esetleges serulesek elkerulese erdekeben. Egyik nap eloveszem a kamerát es nem mukodik, mert para lecsapodás hibával rogtan ki is kapcsolódik. A kovetkezo kerdeseim lennenek Voltak e már hasonló problémáitok. Mi a hiba megoldása. Mi érzekeli a para lecsapodást a kamerában. Okozhat e ilyen hibát a muanyag pufi folia. A választokat várva es előre megköszönve.

Pistili Panasonic DMCTZ3 fenykepezo Udvozlet! Volna ez a kompakt gep, amit hibaskent szereztem. Nincs hozza semmim, akku sem. Tegnap kaptam kolcson egy akkut probara; nem indul a gep. Elozo Gazdi szerint egyszer lehuztak PCrol, azota tokhalott. Mivel nekem abszolot nulla a fenykepezogepjavitasban a tapasztalatom, ennek ellenere megis szeretnem, ha mukodne e gep, kerdeznem, nem vallalnae el Valaki a megjavitast. Elore is koszonom! You can write in English language into the forum not only in Hungarian. Besides the upgrade to ten megapixels from the previous eight, lets take a look and see what other improvements Panasonic have made to the FX series, shall we Its also sporting a new switch at the rear that toggles between shooting and playback, which is a nice addition. All in all, the FX36 has an unassuming style that should appeal to all but the most flamboyant of camera geeks. Besides the Shake Detection, Motion Detection, Face Detection and Scene Detection functions of the previous iA version, the FX36 has added a Light Detection feature which adjusts images that may turn out either over or under exposed. Lastly, you have Red Eye Correction, which is pretty much self explanatory. The colors were suitably saturated, which is something that Panasonic is well known for. This of course, is due mainly to the newly upgraded Venus Engine IV image processing system.

The direct comparison of our color chart showed that the FX36 not only produced more color saturation, it also had a good amount of camera sharpening compared to the FX33. On a positive note, while a higher megapixel count often means smaller sensors and increased image noise, we found that there was actually a good deal less noise at ISO 1600. Sadly, at ISO 100, resolution maxed out to only around 15, which by our books, is decent enough but no way spectacular. There was however, one tiny side effect that we spotted at longer distances the function instead turned redevies to gold, which while jarring, can be easily remedied by getting closer to your subjects. Hardwarezone.com is part of the SPH Magazines Mens and Special Interest Network. This camera will also shoot HD movies in 720p and output HD 1920 x 1080 still images in 169 aspect ratio so you can view your images and videos in glorious high definition on a HDTV. You can also use the zoom function while shooting video. The worldacclaimed FX series pursues high picture quality and unique features in an urbane, sophisticated profile to which the DMCFX35 FX36 proudly joins. The new DMCFX35 FX36 newly integrates the capability of recording 720p HD highdefinition motion pictures together with its direct output function, allowing users to enjoy watching both still and motion pictures in impressive HD quality on a largescreen HDTV via an optional component cable. The Intelligent Auto mode, which comprises various shootingassist functions, has been advanced for the DMCFX35 FX36 by newly adding the Intelligent Exposure feature and Digital Redeye Correction in addition to the conventional Mega O.I.S., Intelligent ISO Control, Intelligent Scene Selector, Face Detection and Quick AF functions. Mega O.I.S. suppresses handshake and Intelligent ISO Control prevents motion blur.

The Intelligent Scene Selector sets the appropriate scene mode by automatically selecting it from the most frequently used scene modes, such as Portrait, Scenery, Macro, Night Portrait and Night Scenery. The Face Detection system detects human faces to set the focus and appropriate exposure for them automatically. The unwanted redevie effect caused by the use of the flash can be digitally corrected. The newly added Intelligent Exposure function automatically controls the ISO sensitivity partially to increase the exposure of only the darkened area due to backlighting or insufficient flash lighting to capture the scene as you see it by suppressing the extreme brightness and darkness in the picture. The Quick AF system allows the camera to start focusing on the subject even without pressing the shutter button halfway, to get the best results from every shooting opportunity by minimizing the AF time. Once you enter iA mode, these multicapable functions happen automatically so you can shoot without the bother of adjusting settings every time conditions change. You can enjoy easy, troublefree shooting in any situation and get the satisfaction that comes with capturing clear, beautiful images. The highperformance imageprocessing LSI has newly entered its fourth

generation, to be reborn as Venus Engine IV to assure higher quality pictures with an advanced signal processing system. The DMCFX35 FX36 boasts a 230,000-dot high-resolution LCD with Intelligent LCD function, which detects the lighting condition and controls the brightness level of the LCD in 11 fine steps, to offer a display with the most appropriate clarity in any situation. Slideshows of captured images now offer a music effect that matches the mood so you can enjoy watching or showing your pictures with emotional impact.

Dressed in a metal-finished panel, the sleek and slim DMCFX35 FX36, a sophisticated camera full of desirable functions, offers the enjoyment of taking snapshots with a fantastic view and fun never before experienced. Notably, a newly developed unevenly thick concave meniscus EAextra high refractive index aspherical lens makes it possible to achieve the 25mm ultrawide-angle high optical performance while keeping the lens unit thin and the body slim. The 25mm ultrawide-angle lens records almost double the viewing space at the same shooting distance compared to ordinary 35mm cameras. Further, in 3-megapixel resolution mode, the Extra Optical Zoom function provides additional magnification, extending the zoom power to 7.1x by using the center part of the CCD. When the lens is shifted back to the wide end, the picture size is set to the original size automatically. The original size is maintained for photos smaller than 3 megapixels.

2. Great Photography Is Not Only from Professional Photographers Anymore

Intelligent Auto Mode Panasonic incorporated the Intelligent Auto mode in pursuit of the ultimate ease of operation and the reduction of misshots. This mode is also further advanced with the inclusion of the Intelligent Exposure feature and digital red-eye correction, integrated in the DMCFX35 FX36. Mega O.I.S. Optical Image Stabilizer to compensate for handshake and Intelligent ISO Control to detect and suppress motion blur are built into all Lumix cameras, as the industry's most advanced countermeasures against blurring. Both image stabilizing technologies have been further advanced in detection accuracy and correction effect thanks to the new image processing LSI, Venus Engine IV. In addition to these two paramount anti-blurring technologies, Panasonic continues pursuing the ideal that anyone at any technical level of photography should be able to take beautiful pictures with ease, by incorporating the Intelligent Auto mode.

Increasing the number of scene modes is one thing and taking advantage of them is another, and that's where the Intelligent Scene Selector comes in. It automatically sets the appropriate scene mode according to the scene you're going to take from among the most frequently used scene modes, such as Portrait, Scenery, Macro, Night Scenery and Night Portrait mode. The Face Detection system helps the camera to recognize human faces and to focus and set the exposure automatically. Up to 15 faces can be recognized simultaneously. Plus, with the DMCFX35 FX36, the red-eye effect can be digitally corrected automatically. The Quick AF system allows the camera to keep focusing on the subject even without pressing the shutter button halfway, to get the best results from every shooting opportunity by minimizing the AF time. A newly incorporated Intelligent Exposure function increases the exposure only in underexposed areas by detecting the brightness level part by part in the picture. If the background includes the sky, which tends to be easily washed out, the camera automatically adjusts the aperture and shutter speed to keep the setting slightly underexposed to prevent washout while brightening the darkened area by increasing the ISO only in that area. If the background of an indoor portrait receives insufficient lighting from a flash and becomes dark, the ISO sensitivity is raised in only the lowlit area to make it brighter without causing graininess in the subject's face. The result is a picture with well-balanced exposure on the whole. These multicapable functions happen automatically, so you can shoot without the bother of adjusting settings every time conditions change; the powerful Intelligent Auto Mode does all the work for you. You can enjoy easy, trouble-free shooting in any situation and get the satisfaction that comes with capturing clear, beautiful images.

3.

Exciting Options to Expand the Fun of Photography in the High-Definition Era All Lumix cameras can

take 1920x1080 pixel HD highdefinition quality photos that perfectly fit a widescreen 169 HDTV for fullscreen viewing. The new DMCFX35 FX36 even records dynamic HD motion pictures in 1280 x 720p at a smooth 30 fps, in addition to WVGA 848 x 480 and normal VGA 640 x 480. With newly added HD component output capability, you can enjoy watching still and motion pictures in stunning HD quality taken by your DMCFX35 FX36 by simply connecting the camera to a TV via an optional component cable DMWHDC2. The DMCFX35 FX36 newly provides slideshows complete with music. Just select the pictures you want to show and choose the mood that best matches your selection from natural, slow, urban or swing, and you'll get an emotionfilled slideshow with a variety of slide change effects and matching music without any annoying adjustments. If you make the slideshow with HD photos in 1920 x 1080 pixels, you can also enjoy watching an impressive HD slideshow with music on a largescreen HDTV by using the optional component cable.

4. HighSpeed, HighQuality ImageProcessing LSI Further Evolves into the Venus Engine IV

A new imageprocessing LSI, Venus Engine IV, features more advanced signal processing technology for rendering even higherquality images. Notably, parallel noise reduction in both luminance signal and chromatic signal processing systems, a technology established by the preceding Venus Engine III, gains a more sophisticated process. First, the luminance noise is twodimensionally separated into highfrequency and lowfrequency noises and only the lowfrequency noise, which tends to be conspicuous, is eliminated without affecting the highfrequency noise that greatly influences resolution. Second, the information of the change point between colors is minutely stored for precise determination of edges, thus color bleeding is dramatically suppressed.

This not only produces a clearer image in high ISO sensitivity recording, but also faithfully reproduces details in lowlit areas of pictures taken at low ISO sensitivity. The Venus Engine IV also elevates the detection accuracy and corrective effect in both Mega O.I.S., which prevents handshake, and Intelligent ISO Control, which suppresses motion blur. Featured in the DMCFX35 FX36, the multitask imageprocessing engine Venus Engine IV supports a superfast response time. The shutter release time lag is as short as 0.005 second and the cameras quick response makes it easier to capture sudden, spurofthemoment photo opportunities. The Intelligent LCD function detects the light condition and automatically boosts the LCD backlighting by max. 40% when shooting outdoors in bright sunshine, and adjusts the frame rate when shooting in lowlit situations in addition to using the pixel mixed readout method to secure clarity in such situations. Detecting the lighting condition precisely and automatically controlling the brightness with a total of 11 fine steps, this function gives the display the most appropriate clarity in any situation without using extra energy. The High Angle mode makes the LCD screen extremely easy to view when the camera is held high, such as when shooting over a crowd.

6. Other Features

The new DMCFX35 FX36 features a variety of functionalities to expand the convenience and fun for users to enjoy taking beautiful pictures. A total of 21 scene modes help you to take more beautiful pictures in a wide range of situations. This information, as well as dates, which can be helpful when making a photo album, can be stamped on photos with the Text Stamp function whether you print them yourself at home or have a photo shop do them. This helps the photographer to instantly switch between recording and playback modes, while always knowing which mode the camera is in.

The GUI Graphic User Interface has been upgraded to look more futuristic in terms of design and color while maintaining the visibility of characters. The major features mentioned above can be quickly understood with the newly installed slideshow program called Demo mode.[Click here.](#)
