Panasonic NVHS1000EGC Sziasztok! Valóban, a készülék sem a gombokra sem a távirányítóra nem reagál, de szekunder feszültségek merhetők. A dilemma az, hogy jöke és vajon hogy csinálja a kábelkapcsolást. A számítógépet megpróbáltam, fel is töltöttem a tanyára, de epp a tápszeker hiányzik belőle. A készülék redkivül bonyolult, nevtelen, ismeretlen alkatrészek halmaza, egyedi, csak beavatottak által ismert technikai megoldásokkal. Ezért fordulok a kollegákhoz segítségért. Hát akad a tanyalokok között olyan aki dolgozott már ilyen gépben, esetleg találkozott hasonló hibával, avagy a tápszeker megvolna neki valahol.

Anno, bizony sok videót javítottam de túlnyomó többségük mechanikai hibával jött. Ezt meg nem nevezte senki pedig nem fiatal, ezért én sem jászának szembekötösdit vele. Barmilyen információt, hozzászólást, tanácsot, szívesen veszek. Köszönöm! UdvRobiA fent nevezett videóhoz kellene táppanel, strf6552 topic van benne. Ha valakinek van bontásra ítélt ilyen készüléke és a tápszeker szívesen alkudnék rá. Köszönöm! Panasonic AG 8700 nem kapcsol be Sziasztok! Nemrég vásároltam a cimben szereplő szornyetegét. Hibásan vettem, hirtelen sikerült megmenteni. De a tápszeker atmertem a tápszeker rendben vannak, ill. a tápszeker rajzot innen a tanyáról szedtem le. A hibajelenség, bekapcsolom, de csak a műszerek világítása működik. Kijelzés nincs de viszont a vákuumcső futása megy. Nem reagál semmire. Procihibára gyanakszom. Egy-két alkalommal valamelyik orsózoagy elkezd porogni. Valakinek esetleg lenne bontva érdekelne. UdvAtis Panasonic NVSJ 407 EE hiba Tisztelt uraim. Segítseget kérnék egy Panasonic NVSJ 407 EE típusú videomagnot illetően. Automata hangolásnál vissza számolja a csatornákat de se kép, se hang csak a hatter és a felirat. A többi funkció rendben. Kérdés, hogy a tuner hibás. Ha igen tudna-e valaki egy bontott, üzemképes tunert felajánlani. Nem ingyen! A tunerén lévő felirat ENG 57808G 008. Az oldalon MB 007 5708E látható! Köszönettel. Introductions are limited to motorLondon Place, London, SE1 2AF, UK. VAT No. 345 7692 64. Looking on forums such as avforums.com and digitalspy.co.uk gave me the answers, but also highlighted the fact that the same things I was asking get asked over and over again. This looked like a great candidate for a FAQ so here it is. Contact me with any comments. They are able to play various different formats of DVD and digital video files, and can also record video to various recordable DVD formats and their own internal hard drives. They have a built in DVBT tuner to allow them to pick up Freeview digital broadcasts in the UK, as well as their analogue tuner.The EX75 incorporates a 160Gb disk drive, whereas the EX85 has a larger 250Gb disk drive.You can also select the Sky box on AV2 of the TV if

required. The Panasonic upscaler is said to be pretty good but you may want to check different output settings to find out which you prefer. The following HDMI output modes are supported Pressing the info button allows the picture to come back but it then disappears again. Numerous channels can cause the problem however some appear to be worse than others and Sky 3 comes up quite frequently. After this, turning back to the original channel seems OK. You can then watch from where you started recording, rewind, stop and fast forward. When a timer recording is set on a UK machine it will lock it into PAL mode. It is a bit of a misnomer, as on other machines it means something quite different, but on the Panasonic the timeslip feature is simply the ability to move forward or backward during playback by a set number of minutes. Holding the arrow button makes the timeslip setting jump in bigger increments.

Useful for skipping over 5 minute advert breaks. For some strange reason however, timeslip is not available if you have the box in ExtLink mode, unless you're recording something at the same time. Go figure! If the Rec for High Speed Copy is set to On however, the WSS flag is not saved. The same anamorphic 16:9 image will be recorded, it is simply the WSS flag, which causes the TV to autoswitch which is not. Again though, the picture being recorded is the same anamorphic picture, and therefore it is simply a matter of switching the TV manually to display the full 16:9 picture. When you've got SCARTs connected together like this there are a whole load of switching signals at work, on pin 8 and also on pins 10 and 12. This is only a theory though. There are a few caveats when using this feature Thanks go to Richard Lawrence who kindly sent in this stepbystep guide for those out there who may want to give it a try Now if you reopen the file the changes will have stuck. You can buy these on the internet, or direct on the high street, and sometimes shops will change the unit to region free for you if you ask them at the time of purchase. Region free setting this way uses a service remote that is only generally available to authorised retailers. Some places will charge you for this service, others may do it free of charge. A few sites that offer this service are If you want to, you can use other devices capable of producing infrared signals to output these codes yourself. Some sites have explanations on how this can be done, for example Short of modifying the firmware there isn't anything you can do about this. The most recent publicly released OTA version appears to be v1.16, which was broadcast in August 2007 and repeated again in September 2007. If you miss it, then there's not a lot you can do. Recordings using either the 160GB hard drive or universal disc formats offer flexible control.

And both recording and playback performance is excellent Panasonics DMREX75 features a 160GB hard drive and recording compatibility with all disc formats in a single system. Recording quality is as close to the poised and colourful original as you could ask. DVD playback is equally attractive especially using HDMI to an HD Ready TV. With only a single digital tuner you won't be able to watch one live programme while you record another, but that is one of the few flaws. This is expensive for a recording device, but we feel the price is justified by the range of features, the usability and the excellent picture performance. And it's only the unit's contrasting weight that implies there's more technology here than meets the eye. Also within close reach at the front is a set of standard AV connections including a DV input that lets you to transfer high quality footage from a digital camcorder. And a neatly integrated SD card slot completes the front panel features I think allowing you to transfer, store and edit JPEG digital photos on the hard drive, which can then be upscaled for high definition quality viewing. The best is an HDMI digital output that allows the upconversion of DVD images to high definition 720p and 1080i resolutions that perform exceptionally well with the latest HD Ready flat panels. A separate HDMI input wouldn't go amiss, allowing you to record straight from high definition sources like an HDTV receiver, but few recorders can claim this feature. You can use the Scart input to connect devices like your now redundant VCR to rerecord your old videotapes, and with VHS Refresh Dubbing technology the quality of images actually improves on the original. There's also a set of component inputs that will support progressive scan video and some high definition sources using an adaptor cable, while surroundsound setups can be

Learn more As well as the HDMI output, this deck has comprehensive socketry including DV input for camcorder users, SD Memory Card slot, component video outputs progressive scan capable, naturally, as well as a pair of Scarts that accept and deliver RGB signals. The 160GB hard drive is good for 284hrs of recording in the lowestquality setting, or 36hrs in the topquality 10Mbps XP mode. Theres also a flexible FR mode for fitting an awkwardly timed recording into a limited space without having to sacrifice picture quality unnecessarily. DVD burning runs the gamut you can record on any type of disc, including duallayered variants. More good news comes in the form of an onboard digital tuner with 7day EPG. Theres also VHS Refresh Dubbing, which cleans up old VHS recordings when you transfer them to HDD or DVD. Programme editing is very flexible, especially on the hard disk, but also on DVDRAM discs. You can build up a playlist to change the order of playback, or erase sections of a programme such as adverts to reduce the amount of space needed on disk, or when transferring to DVD. Perhaps the most important thing to remember is to access the HDMI output setting to choose the level of upscaling if any that you want.
