Id like to start with a tray that can accomodate 2 handles. They come in so many sizes and widths. Not sure what to get. I like to add 1 arm FlexArm or some other type How long should it be. A pretty nice LED light with defuser that can be used for video and maybe Photos while I save up for a Strobe. Or would you guys recommend getting the strobe first and adding the LED light later. Geez so much to learn. Click to expand. Strobe versus light. Ill keep my video to ambient light for the time being, or fire off my Salvo HID Ill have to equip it with a DIY diffuser. Ill check out the Optical Ocean Sales. Do you use a dual arm or single. Dual meaning a strobe on one

side and focus light for video on the other. Also do you recommend FlexArm or some of the other Ball joint arms I couldn't get the link to the 2479.avi to work. I'll do a search. Thanks I'll keep my video to ambient light for the time being, or fire off my Salvo HID I'll have to equip it with a DIY diffuser. <http://radis-rrl.ru/userfiles/canon-rebel-xs-1000d-manual.xml>

Also do you recommend FlexArm or some of the other Ball joint arms I couldn't get the link to the 2479.avi to work. I'll do a search. Thanks Click to expand. I use a dual arm, with dual strobes while I have a big blue video light, with manual white balance see video. I find I don't need it. As a side note, most directions for using white balance don't work that well the white or grey card for example. I really need to post before and after videos to show just how striking the effect is. I've decided to go with the Inon 2000S Strobe. My question is What fiber optic cable do I use. Does anyone have a part number and place where I can order it from. Should I try to get the Strobe, tray, arms and FO cable from the same place as a package. Sorry I'm such a noob at this. For video without a video light, do you recommend just using the Underwater mode or do you recommend using Manual WB. If Manual WB, what is the best way to set it if using the grey card doesn't work that well. For video without a video light, do you recommend just using the Underwater mode or do you recommend using Manual WB. If Manual WB, what is the best way to set it if using the grey card doesn't work that well. Click to expand. The only difference is manual white balance. These happen to be Canon ones, but the same rules apply for any camera. So, in general, here they are 1. Shallow, clear water. I adjust with the grey card, things will have good color close to you, but things farther away will not. Off the panhandle, tried white, grey. Then I tried using the bottom, pointing it at various directions and distances heck, it is only a button push, until you get the right look, and then doing the video. Water now looks like some tropical, clear water place. I have a lot of really green, washed out videos I did, until I learned to just be willing to reset manual until I got good color. This was filmed about 50 yards away from where the nurse shark was done.

You will notice that at the very start, there's sunlight over exposing the red channel. This is in around 70' of very green water, and that channel is turned up about as high as it will go. Since 2000, ScubaBoard has been the place to go for internet based discussions related to all things Scuba. Joining has its benefits and enables you to participate in the discussions. Login or Register now by clicking on the button. First time try underwater with this baby and I am pretty wowed by the results. Set at underwater mode for photo and video limited settings. Note I found iA works better than underwater mode for photos at night dives. Everything else was auto. I found that focusing beyond 0.5m infinity gave undesirable blurriness. I guess I zoomed too quickly. Also, macro vid is best stuck to little or no zoom. At 38.9m I did experience the menu toggle going nuts. Once up to 18m it was ok. I am not sure if it is due to its newness or needing a faster SDHC card. The buttons seemed quite pressable though. Anyway, I managed to upload some example vids on YouTube since it can take HD mts files. Thanks for sharing. Wicked, do you mind posting some photos up that you took with this camera. I just got the ZS3 for personal use, I'm thinking about getting the underwater case. I can't wait to give it a try. Any pointers for an amateur photog I will soon post some photos too. Am trying to get my head around why the colours aren't as vivid in video mode though am sure will work it out one day. Also this link is extremely useful. It's most helpful for the focusing workaround. IMO the Lumix is a better value than a Canon. Since 2000, ScubaBoard has been the place to go for internet based discussions related to all things Scuba. E PP Model No. N o de mod ele VQT2C21.book 1 2009420 1214 Fai qui la tua domanda. It's one of those items that you don't use all the time but sure nice to have for vacation. Of course I would pay up front via paypal. Thank You Todd However, there is no telling when it will be available in the US. Reseller Ratings I really want to know how well the ZS3 does under water before I purchase the case. Thank you for the suggestion though. Todd Despite a couple of quirks, we think it's a camera that photographers and non-photographers alike will find fun to use. 1412 Sony a7C initial review Compact size, big sensor image quality first impressions Sep 15, 2020 at 0100 Sonys a7C is among the smallest fullframe mirrorless cameras you can buy, and in terms of core capability, not much has been sacrificed for the sake of compactness. But are you ready to make it your next go-to travel camera. Find out how it stacks up in our initial review. 475 Panasonic Lumix DCS5 initial review first impressions Sep 2, 2020 at 1400 The Panasonic Lumix DCS5 is a fullframe mirrorless

camera but in a body smaller than the Micro Four Thirds GH5. It includes updates to Panasonic's DFD autofocus system, creative photo modes, and video features that come close to matching the more expensive S1H. 330 Nikon Z5 initial review review Sep 1, 2020 at 1300 Nikons new entrylevel mirrorless fullframer feels anything but entrylevel. And it may well be the model best positioned to convert remaining Fmount holdouts to Zmount. 1224 Canon EOS R6 Review not the hybrid king, but a great photographers camera review Aug 26, 2020 at 1440 The Canon EOS R6 doesnt quite live up to the full promise of its doeverything specs, but its a great photographers camera. Weve selected seven cameras ranging from compacts to fullframe, all of which are easy to operate. Best enthusiast long zoom cameras Sep 16, 2020 at 0041 Longzoom compacts fill the gap between pocketable cameras and interchangeable lens models with expensive lenses, offering a great combination of lens reach and portability.

Read on to learn about our favorite enthusiast long zoom cameras. Best video cameras for photographers Sep 13, 2020 at 1200 Most modern cameras will shoot video to one degree or another, but these are the ones we'd look at if you plan to shoot some video alongside your photos. We've chosen cameras that can take great photos and make it easy to get great looking video, rather than being the ones you'd choose as a committed videographer. Best cameras for travel in 2020 Sep 9, 2020 at 0215 Whats the best camera for travel. Good travel cameras should be small, versatile, and offer good image quality. In this buying guide weve roundedup several great cameras for travel and recommended the best. The best lenses for Sony mirrorless cameras Sep 4, 2020 at 2215 Whether youve grown tired of what came with your DSLR, or want to start photographing different subjects, a new lens is probably in order. Weve selected our favorite lenses for Sony mirrorless cameras in several categories to make your decisions easier. Panasonic Lumix Underwater Camera Housing. For sale is my Underwater housing for a Panasonic camera. It is suitable to a depth of 40 metres. I have owned it from new, but Im now selling it as Im having to give up Scuba diving due to a medical issue. Thanks for looking. You are the light of the world. The editors will have a look at it as soon as possible. Camera Make Camera. Mavericks Diving. Learn More I'm telling you all this because I'm about to add to the controversy with today's review; the new Lumix DMCTZ7 is another seriously good camera from Panasonic, and so I'm afraid it's going to get another high score. The TZ7 is a completely new camera, with a new body, a new lens and some new features. It uses the advanced AVCHD Lite recording system, a video encoding format designed for solidstate camcorders. The TZ6 is very similar, but lacks the HD video mode and has a smaller 2.7inch 230k monitor. It measures 103.3 x 59.6 x 32.

8mm and weighs 229g including battery and card. This is actually slightly slimmer and about 10g lighter than the TZ5, but it's still a big chunky camera. The body is all aluminium, finished in a semimatt texture, and it is available in black, dark brown or the plain silver finish shown here. The TZ series has always been sold as travel cameras, and the TZ7 is designed to survive a bit of rough treatment. The overall build quality is extremely good, and almost all the controls are robust and solidly mounted. However there is one exception, and it represents one of my few real complaints about the TZ7. The main mode dial on the top plate is very loose and has a very weak ratchet, and as a result it is easily turned accidentally and can end up between settings. Since the camera won't shoot unless the mode dial is correctly positioned this can cause annoying delays if you're trying to shoot quickly on the spur of the moment. There is a small but comfortable handgrip on the front, and a textured thumbgrip area on the back which make it easy to hold securely, and despite the huge monitor screen the controls are well spaced out and there's plenty of room to grip the camera without them getting in the way. With a resolution of 460,000 dots it's twice as sharp as most other compact camera screens, and has an exceptionally wide viewing angle in all directions. It also has automatic brightness control, and although it is a bit reflective and prone to glare, it is bright enough to see clearly in bright daylight. Apart from the annoyingly loose main mode dial, which I've already mentioned, the TZ7's controls are very good. The zoom control is particularly nice. It is smooth and nonstepped, and the control has a progressive action, so it zooms faster the more you turn it. The buttons are all metal and are solidly mounted, operating with a nice positive click.

However it still has a fairly wide range of user options, including multiple AF modes, three metering modes including spot metering, a limited range of colour options, threeshot burst and continuous shooting, ISO settings from 80 to 1600 and the usual range of white balance options. In most other cameras, selecting 32 or 169 aspect ratio simply crops the image down from the 43ratio fullscreen

sensor. However the TZ7 actually has a 12.7 megapixel sensor, so even the 10.1 megapixel 4:3 aspect ratio is cropped down. Selecting the wider aspect ratios uses a wider section of the sensor, so they actually cover a wider area than the 4:3 setting. This means that the widescreen formats are ideal for landscape photography. The various settings are accessed via the conventional main menu, but can also be adjusted from the onscreen Quick Menu. As well as the full range of options the TZ7 also has Panasonic's Intelligent Auto system, which sets exposure, ISO, image stabilisation, tracking AF, scene mode and face recognition automatically. I'm not usually a big fan of "idiot modes", preferring more manual control, but I have to admit the Panasonic iAuto system does produce excellent results in nearly all situations. The Baby and Pet programs have the option to include the subject's name and age, and the age is automatically updated each year. There is a highspeed burst mode which can shoot at 10fps until the memory card is full, although it's limited to a maximum of 3MP. Other interesting options include pinhole camera and film grain simulations, a flash burst mode and an underwater mode for use with the optional DMWMCTZ7 diving case, which is waterproof to a depth of 40m. In singleshot mode at the highest quality setting it has a shottoshot cycle time of comfortably under two seconds, which is pretty quick, however in continuous shooting mode it can manage 1.8 frames a second, which is very fast. It also has a threeshot burst option which is even faster.

The autofocus system is very good. It focuses quickly and accurately in almost any lighting condition at all, including pitch darkness thanks to a good bright AF lamp with a range of around three metres. Even at the long end of the zoom range the AF hardly ever hunts around, and focuses in under a second. Only at full zoom in very low light does it stumble, but even then at least it lets you know quickly that it can't focus. Sound and picture quality rival the performance of a dedicated camcorder, and the progressive zoom action means you can do some nice slow zoom effects. Unfortunately clips are limited to 15 minutes, but this is not a major handicap. Unless you've got a video viewer that has the appropriate codecs you'll need to use the supplied software to view your movies on a computer, but the TZ7 also has a HDMI output socket, so you can plug it into your HD TV. Colours are rich and vibrant, exposure is nearly always perfect, and the lens is, as we've come to expect from the Leica brand name, superb. It does suffer from slight barrel distortion at the 25mm wideangle end, but it is pinsharp from corner to corner, with no chromatic aberration, and the level of recorded fine detail right across the frame is excellent, surpassing most 12MP cameras. At the highest quality setting the average file size is around 5.5MB, which is pretty decent for a 10MP camera, showing very low compression. It produces superb image quality at 80 and 100 ISO, and while there is some noise visible at 400 ISO the images are at least printable, with accurate colour and good detail. However image quality does deteriorate at 800 ISO, and the 1600 ISO maximum setting is best avoided. Build quality, design, performance and image quality are all excellent, it has a useful range of easytouse features, and of course it also has a superb HD video option with stereo sound.

On this page the full size image at the minimum and maximum ISO settings have been reduced to let you see the full image, and a series of full resolution crops have been taken from original images at a range of ISO settings to show the overall image quality. These ISO test images are shot indoors using reflected natural light for maximum consistency. " In some cases, the full size image has been reduced for bandwidth purposes, and a crop taken from the original full resolution image has been placed below it to show the overall image quality. Some other pictures may be clicked to view the original fullsize image. " See below for a full res crop, or click to see the whole picture. Some pictures may be clicked to download the full size original image." It looks a bit dull but it's famous for its bird life. The 25mm wide angle captures it in all its glory. The highlights are burned out, but there's plenty of shadow detail. We use industry standard tests in order to compare features properly. We'll always tell you what we find. We never, ever accept money to review a product. You can use your digital camera to take underwater photos at depths of up to 130 40m. It is also ideal for

taking worry It comes with the original box and all the original accessories. I purchased it for my honeymoon and now with the baby, dont plan to use it anytime soon. It It allows your Panasonic GM1 camera shooting underwater down to Fits Panasonic GF2 anf kit lens other lenses may fit. I got it on a whim hoping my gx1 would fit, but no such luck.
