to not go TOO light! NO, MP does not sell these. Why its important to not go TOO light! It discussed wheel weights, and strength of the wheels. It mentioned how with lighter wheels they can flex more under hard cornering, affecting your cornering and handling. This beauty has a rare Kaminari front lip, Carbon By Design air induction hood, 15 inch Rota Slipstream wheels, a fresh repaint and more. This car reminds us of Clarence's old Neon SRT4 that was painted a very similar color. Why its important to not go TOO light. To identify which circuit code applies to a system, refer to the Circuit Identification Code Chart. This chart shows the main circuits only and does not show the second ary codes that may apply to some models. For exam ple, the Auto Shutdown Relay is most likely to be found in Group 30, so it is shown there complete. It can, however, be shown partially in another group if it contains some associated wiring. Section 8W70 only contains splice dia grams that are not shown in their entirety some where else in the wiring diagrams. Some connectors are serviced only with a harness. A typ ical example might be the Supplemental Restraint System connectors. Always check parts availability before attempting a repair. Multiple connec tors on a component use a C1, C2, etc. identifier. Below is a list of general warnings that should be followed any time a vehicle is being serviced. These tools are listed and explained below. It can be used to bypass an open in a circuit. When checking voltages in these circuits, use a meter with a 10 megohm or greater impedance rating.

Then, you will definitely love Americans muscle cars. Coined in 1949 due to Then, you will definitely love Americans muscle cars. Coined in 1949 due to the demand for a fast car, muscle cars have become one of Americas most loved cars. The 1960s and 1970s saw the creation of some of the best muscle cars of all time. If you are looking for a muscle car, read one as we look into some of the best muscle cars. The Mustangs have undergone a series of transformation from the first to the fifth generation. There is more to this car that will make you want to own it. It was based on an Fbody platform and offered no less than three sixcylinder engines and four V8s. A longer and wider Camaro was then introduced in 1970. The fifth generation Camaro was later introduced in 2010 with a better body and an even better performing engine. Several other challengers were later introduced over the years but the oil crisis crippled the sales of the muscle cars and this lead to the early retirement of this car in 1974. In 2008 the challenger made its way back and this 3rd generation challenger has soldiered on and so far has had a number of stylistic updates. It is very fast and has a 797 horsepower supercharged V8 engine. It featured fourwheel disc brakes, optional side exhaust pipes, a big block, and a 6.5 liter V8. This muscle car has gotten even better with time and the C6 generation that was produced from 20052013 and has better handling and is a muchloved sports car. Get ready to experience this legendary ZR1 supercar with a 755 horsepower and a top speed of 212 MPH. If you want a luxurious muscle car, the dodge viper will be an ideal choice.

This car has been in the market for 25 years and it is one of the best classics. It also borrowed a little bit from the Ferrari. This muscle car was an instant hit and GM improved its performance over the years. However, in 1974, its sales went down forcing its production to stop. Though you will not be able to find a new Pontiac because 2006 was the last year it was produced you can still buy it from its original owners. In 1967, the second generation Plymouth was introduced and it had responded to the need of the market. The model was much more aggressive with a V8 motor and better handling. It had three V8 engines and was on its way to muscle cars success. These cars have both high and low performing options but if you want to feel the real American muscle cars, then the high performing option is your ideal choice. Subscribe to our newsletters. Having a vehicle that is both appealing and reliable is essential. With Having a vehicle that is both appealing and reliable is essential. more power for offroading When buying a Jeep Wrangler, you can take advantage of several unique and helpful features. While this newer model pays homage to the Wranglers of the past, it is definitely unique. The main difference between the new Wrangler body style and the old one is the longer and wider body. The four-door model is around 4 inches longer than previous models. These new Wranglers also have a larger wheelbase, which is perfect for traveling over rugged terrain. Accommodating this larger and thicker glass required Jeep engineers to get creative with how they structured this new Wrangler model. The team at Jeep understands their offroad-loving Wrangler audience extremely well. This is why the new Wranglers feature steel bumpers.

These winches are a must-have for any offroading enthusiast that wants more versatility. If you are ever stuck, pulling yourself out should be easy with the help of your durable steel bumper and a high-quality winch. If you are looking for a great deal on a new or used Jeep Wrangler, be sure to visit this dealership. With their help, you can get the Wrangler of your dreams without overpaying. The newer model Wranglers come stock with six-speed manual Aisin D478 transmissions. Not only do these transmissions pack a punch, but they can also help to improve fuel efficiency. The mild-hybrid engine features in the new Wrangler is said to provide both fuel economy and plenty of offroad performance. The design team at Jeep has turned this notion on its head with the delivery of the powerful and efficient Wrangler. One of the biggest selling points of the Jeep Wrangler has always been its ability to climb hills and rock facings. As with many other features, the new Jeep Wrangler has taken the climbing angles it is capable of to a whole new level. Both the JK and JL Wrangler models have improved approach, breakover and departure angles than ever before. The Jeep Wrangler is a vehicle designed to make traversing rugged terrain easy and safe. Luckily, the new Wranglers feature 33-inch BF Goodrich tires. You can also upgrade the tires if needed. With this setup, getting over mountainous terrain will be easy. These upgrades will provide you with more versatility and appeal. The last thing you want is to get stuck in your new Wrangler, which is why paying for the extra bells and whistles is a great idea. The first thing you will notice when getting in this vehicle is the push-button start and the 7-inch touchscreen display. Connecting your phone to your new Jeep Wrangler allows you to talk hands-free and listen to your favorite music. These features allow you to get the best mix of technology and old-school torque.

This vehicle retains its value and will provide you with years of enjoyable driving experiences. If so, be sure to check out the other blogs on our website. Get your search started with these beautiful models to find the perfect fit! Almost like the nameplate on the back of a football player's jersey. The Demon has 830 horsepower to pick up as fast as your everyday commute will allow. Its reputation is so powerful, even Bumblebee from Transformers wanted to be one. The new Camaro adds on its reputation by integrating a new package that pairs perfectly with its classic style. That re-engine you've heard so much about. Still there. Who says you can't have it all? If so, the BMW M2 would fit you quite nicely. All those factors make this a match made in Munich heaven for you and your sports car fix. It has fuel efficiency, access to 455 horsepower, seven-speed manual stickshift if you desire, and a fair price for the amenities you're receiving. Nothing like having the size to match the speed of your new sports car! Who doesn't want one. Read our complete guide on the slickest American sports cars. The muscle car gives a driver power and speed but they also look slick! Sales of muscle cars in America have increased nearly 35% since 2005. Not all muscle cars are equal. Throughout history, a few muscle car manufacturers have withstood the test of time. While a few entries took a break from production, they always came back strong. These entries were chosen based on their prominence, history, and popularity. Many early variations of the Corvette were mainly convertibles. The Corvette is a sports car known for its slick design and powerful engine. The 2016 model includes a 6.2-liter V8 engine. The Chevy Corvette Z06 for 2016 has a seven-speed manual gearbox option. One beloved feature of newer Mustang models are the rounded headlights. One notable difference is the 5.0-liter engine, with most competitors a 6.0-liter is common. The 2017 Ford Mustang GT features 435 horsepower.

Early generations saw this vehicle as a sleek and rounded sports car. This generation is when the longer front end design of the Camaro became the norm. Chevrolet decided a new generation would begin for this American sports car in 2010. The Camaro is now in its fifth generation of production. During its earlier generations, the Challenger would struggle to build a legacy against already established vehicles. In 2008, the modern Dodge Challenger would debut its 4th generation design. This newer Challenger is notable for its classic muscle car appeal. [Click here to learn more about the history of American automobiles.](#) These are the kind of folks that believe in keeping These are the kind of folks that believe in keeping a vintage automobile in original condition. Although I respect these people and their beliefs the act of keeping every nut and bolt issued from the factory isn't right for everyone. As for me, I prefer to drive my automobile to the car show. Furthermore, I want to enjoy the ride and arrive at the auto show safely. In order to achieve these lofty goals some of the original parts on my personal classic car required an upgrade. Not only did I want to arrive at a car show safely, but when things wrapped up I wanted to get in and have it fire right up to take me home. Nothing ruins an amazing day like having to call a tow truck to drag your classic car back to home base. So let's get into three classic car upgrades that make sense from a reliability and safety standpoint. From the factory the mighty Mopar came with a 45 amp alternator. These types of low output units make your headlights appear brown at idle. Although these muscle car era alternators remain a major upgrade over the generators installed in the early 1960s, they still leave a lot to be desired. Even if your late 60s or early 70s muscle car came from the factory with an alternator, you probably still have an external regulator.

It wasn't until the mid 1970s when vehicle manufacturers started moving the voltage control function inside the alternator case. When an externally mounted voltage regulator develops issues it can limit the voltage output. It can also fail in the opposite direction. In this situation the battery will overcharge. And overcharge scenario boils away the water and acid fluid covering the lead plates. Symptoms of voltage regulator problems include a consistently dead battery and headlights that appear dim at idle. In an overcharging situation you can often hear a gurgling from the battery. You can find more information about this subject from this [great article about charging system diagnosis and repair.](#) With that said, charging system upgrade kits abound for popular muscle cars like the Chevrolet Chevelle and Chevy Camaro. This can become a dangerous situation. When you're driving behind a modern car you need to allow extra space because of their ability to stop in half the distance as you. In an emergency situation this may not be enough. A single reservoir master cylinder is often found on older cars that use four wheel drum brakes. This single chamber design uses one fluid reservoir to supply brake pressure to all four wheels. Obviously, if the fluid leaks out you lose braking at all four wheels. As the 60s rolled on, car makers faced increasingly strict safety standards. Therefore, these American car manufacturers improved brake designs by adding disc brakes to the front. This provided an opportunity to use a dual chamber master cylinder. The larger master cylinder chamber provides fluid for the front disc brake calipers. A dual chamber master cylinder allows the front and rear hydraulic braking systems to act independently of each other. Now, in the scenario of a hydraulic brake fluid leak on the front brakes, the driver can still use the rear brakes to slow the vehicle. And this is why a master cylinder upgrade makes my top 3 list of classic car upgrades.

These cars didn't stop well. However, at least all of the automobiles on the road at that time stopped in the same total distance. The invention of antilock braking systems cuts the stopping distance in half when compared to a vintage automobile. For this reason it's recommended that classic car owners improve the braking system for regularly driven classic automobiles. This often requires the upgrade of the master cylinder as mentioned above. You can also add a vacuum operated power brake booster that multiplies the brake pedal pressure from the driver. Fortunately, this is one of those classic car upgrades that remain extremely popular. In fact, Entire businesses have grown to support disc brake conversion. Considering that this can save major damage to a significant

investment and maybe even save a life, the money would seem well spent.
