This model is ideal for an installation that would make it a central focal point or a room divider. The combustion chamber comfortably loads 50cm logs and there is an ash pan. Dovre stoves feature a glass aeration system that directs secondary combustion gases along the glass for a window that stays cleaner for longer and comply with new stricter emission standards. The unit comes with a top flue exit. Dovre is imported from Belgium, and comes with a 5 year limited warranty. Post your question here in this forum. Were committed to dealing with such abuse according to the laws in

your country of residence. When you submit a report, we will investigate it and take the appropriate action. We will get back to you only if we require additional details or have more information to share. Note that email addresses and full names are not considered private information. Please mention this; Therefore, avoid filling in personal details. Please enter your email address. In fact, Dovres manufacturing expertise with premium grade cast iron is such that all cast parts on their stoves and fireplaces come with a 5 year guarantee. With expertly crafted wood burning and multifuel fires and stoves as well as highly convenient gas and electric models, there is a Dovre for every home. The units have solid cast iron fireboxes with controllable airwash class cleaning vent, primary vent control and riddling grate they also have variable electric fan assisted heat convection as standard. Dovre 2510 C classic square glass display Dovre 2510 R rustic rounding above glass Dovre 2510 CTD double sided classic square glass display Dovre 2510 RTD double sided rustic rounding above glass Download the specification sheet Download the user manual. Also included is an instruction manual. Once the fans are turned on they will start and stop by means of thermostat control. The convection chamber is made from 2mm mild steel. Logs up to 50cm in length can be used.

The riddling grate with open and close position ensures optimal combustion regardless of the fuel being used. Convection air can be channelled, through secondary ducts to adjacent rooms. Just be aware that this will decrease your convection in the primary area. Trim plate is an optional item. These units are effective and economical fuel users and produce heat by way of convection and radiation. There is something magical about the atmosphere of living flames and it will really turn your house into a home. These fireplaces are easy to operate and to clean. Turn your open brick fireplace into an effective and economic fuel user with the added advantage of an enormous heating capacity, by installing a Dovre insert. Some the inserts feature electrical fans that assist the convection to give a very quick and optimum heat distribution throughout the area. Heat is released into the surroundings long after the fire has gone out. Cast iron is resistant to strong thermal stress and retains its shape. The fireplace thus remains tight and has a very long service life. Use your fire optimally by installing a doublesided unit between two rooms. Logs up to 50cm can be used in most built-in units. With most built-in units, convection air can be ducted to other rooms with flexible ducting. Surrounds, mantelpieces and toolsets can be used creatively to add a beautiful Victorian or modern effect to your home interior. Rating Bad You need JavaScript enabled to view it. As well as instructions for installation and information about use, you will also find Please read this booklet carefully before installation and before firing the unit. Save this booklet and pass to any subsequent user who can also profit by it. Your DOVRE purchase has made you the owner of a high quality product that symbolizes a new generation of energy saving and ecologically safe heaters, producing Through the application of a revolutionary combustion concept DOVRE heaters achieve astonishing Our heaters are produced in accordance with ISO 9002, using state of the art production means. In the unlikely event of a malfunction, you can always rely on DOVRE's after-sales This heater is designed to be installed in a living room and to be hermetically connected to a flue chimney. If the stove is professionally installed, connected to a wellfunctioning

chimney and Please consult an expert when installing and connecting the heater. The manufacturer cannot be held liable for problems caused by faulty installation. The heating unit is best installed, commissioned, and checked by a competent installer who is aware of national and local legislation. The heater is designed to heat a room, which means that all surfaces, including the. Please do not place any curtains, clothes, laundry, furniture or other combustible It is advised to make a fire in the stove with the highest possible intensity right after This may involve some It is necessary to maintain and regularly clean the stove and the chimney for the Please follow the cleaning instructions in the chapter concerned.

In case of a chimney fire, immediately close all air intake vents of the appliance and Broken glass should be replaced before using the heater again. The stove is specifically designed for burning certain kinds of fuels. In the technical The Dovre model is designed to provide a fireplace convection system without the The principle of operation is Warm air is produced from the inner cast iron surfaces of the Flexible piping This can be either in the same room as the appliance or in It is essential to ensure that the warm air The cooler room air entering the lower level moves the warm air by convection, The fireplace should be hermetically connected to a wellfunctioning chimney, sufficiently enclosed to keep combustible materials floor and walls at a distance, and Please inform about national or local norms and regulations concerning this subject. Your distributor will give you the necessary advice. Please read the technical specifications under cover in this manual before installing The chimney the flue has a double function. It draws air, that is necessary for good combustion, into the stove. It functions as an exhaust pipe for combustion gases via thermal or natural The heated air in the flue is lighter than the colder air outside the flue and consequently rises up, along with the combustion gases. Natural draught is caused by environmental phenomena, such as wind. It is prohibited to connect several heaters to one chimney for instance the central Please check which chimney is to be used for the stove you purchased and whether You should consider an experts The chimney should meet the following conditions. The flue should be made of fireproof material. Ceramic or stainless steel is recommended. The chimney should be airtight and thoroughly cleaned and should guarantee a It should run as vertically as possible.

Changes in direction or horizontal segments will disrupt the smoke flow and may cause soot to cumulate inside the The chimneys inside dimensions must not be too large in order to prevent the For recommended chimney dimensions, see Larger dimensions can be used if the flue The flues diameter should be the same throughout its whole length. Wider, or Especially if the flue runs through unheated rooms or outside the house, further Metal chimneys, or parts of the chimney outside heated The part of the chimney outside the roof should always be insulated. The chimney should be high enough at least four metres and should end in a The rule of If the distance between the Depending on the presence of nearby buildings or trees, the chimney should be higher. The burning of wood, charcoal or gas involves oxygen consumption. It is of the utmost importance that the room in which the stove is installed should be sufficiently Insufficient ventilation may disrupt the combustion process and cause the smoke If necessary, you can install a ventilation grille to provide a constant flow of fresh air The DOVRE fireplace has been designed to produce most heat by means of convection. Heat is mainly transmitted through the back panel, the lateral panels, and the As this air For optimal heating and leading the convection air, the airflow must not encounter In case convection air is supplied At any rate, assure proper home air management and sufficient air supply into the Ensure not to use other airconsuming appliances, such as heaters, cooking hoods, The appliance shall be installed on floors with an adequate loadbearing capacity. Combustible material must be sufficiently protected. The floor under the fireplace Under the appliance. Under the appliance, any combustible material must be removed or specially The legs of the Floor round the appliance.

A floor made of combustible material must be properly shielded in the following Combustible walls

behind, next to, or above the fireplace must be shielded with fireproof materials. Within the radiation area of the fireplace, assure a distance of at least 80 cm between the opening of the fireplace and combustible material. That distance may be reduced to 40 cm if the combustible material is sufficiently shielded and well ventilated. Outside the radiation area of the fireplace, assure a distance of at least 5 cm between the mantle. A wooden ornamental rafter must not be installed within the radiation area. No combustible material must be present within 50 cm from the convection outlet. Please inspect the fireplace for damage caused during transport immediately after delivery. Do not put the appliance into operation in the meantime. In order to avoid damaging the fireplace during installation and to make its handling easier, it is possible to change the direction of the door opening. On each side you have already the system. You can remove the clapet and the hinge by holding it upward and moving it a little. When you loose the bolt in the top plate you can remove the decorative frames, 3 and 4 sides versions are fitted to the appliance after installation. Ensure that sufficient space is allowed to both sides of the recess. Assemble the different parts of the handle, i.e. a screw, M8x50, a wooden handle and a nut, as indicated on the sketch. For protection, the unit must always be connected to power. The appliance is supplied with a speed control to vary the running speed of the fans. This can be left trailing or fitted to the wall mounting supplied. The appliance is designed to be built into a new or existing chimney breast installation to provide space heating by radiant and convected heat. Build the new fireplace around the appliance ensuring that no materials are built directly onto the appliance.

If flexible warm air ducts are to be used, install air grills at the outlet locations. Where the fireplace backs onto another room or is in the corner of a room, backing never use grills made from plastic or other combustible materials. Ensure that the weight of the main chimney or chimney flue liners is not directly supported by the appliance. Flue liners must be supported independently of the appliance. The recess should be formed using an appropriately designed raft lintel to support the minimum clearance between the appliance and the chimney. It is recommended to fix insulating panels to the sides, back and top of the appliance. Never allow marble, granite or masonry to be in direct contact with the metal outer casing. Always use insulation. Prepare the opening ensuring that adequate support is provided for the chimney and ensure that enough height is allowed to adequately support the chimney. If necessary, construct a raft lintel. If the recess is too wide, use insulated building blocks to reduce the width. Clean thoroughly the floor, wall and top of the recess. Stand the appliance in the recess and use a spirit level to ensure the unit is level. If an existing masonry is installed, the appliance should be connected to the chimney. It is important to ensure that the weight of the main chimney or chimney flue liners is not directly supported by the appliance. Flue liners must be supported independently of the appliance. When the appliance is installed in the right place, its connection with the chimney made airtight, and the masonry mantle completely mounted, all loose parts. Your fireplace is now ready to be used. Depending on the materials used for mounting, it is recommended to wait for 24 hours before lighting a fire. Attention never light a fire with the inner plates or refractory stones removed. Packaging materials should be disposed of in a responsible way and in accordance with governmental regulations.

Combustible Refractory Opening against Isolation min Extra opening Fireproof wall Stainless steel Insulation if Combustible Convection air Convection air Convection air Fireproof floor. Combustible Example of fireplace installation within combustible material Extra opening for Refractory cement or Existing fireplace. Opening against Convection air Ventilation Convection Example of installation in an existing fireplace The only suitable fuels for this stove are wood, brown coal briquettes and charcoal. No other fuels are allowed to be burnt, as they can do not burn any treated wood either, such as scrap wood, dyed wood, impregnated. The fumes of these, as of synthetic materials, old papers and household waste, are highly polluting for both your stove and they also could cause chimney fires. Wood. Hard woods, such as oak, birch and fruit trees, are the ideal fuels for your stove. The wood must have dried for at least two years in a covered and well ventilated. Dry wood should contain no more than twenty percent moisture. Wet

logs are unsuitable for burning, as they do not produce enough heat and all of Moreover, the burning of wet wood Brown coal briquettes. Brown coal briquettes burn in more or less the same way as wood does. You should Charcoal. There are several categories of anthracite coal. Some characteristics may be legally The ash content may range from 3 to 13%. For a good operation of your appliance, the use of anthracite "A" with a low ash content is recommended. A combustible with a high ash content has a lower net heating In order to create sufficient draught and to prevent smoke from being emitted into A cold chimney can be heated up by lighting a ball of paper above the fire plate. Slightly open the door. It is important that the kindled fire should burn intensely. You can then throw larger When the fire has stabilized and is Always keep the stove doors tightly closed. Never let the doors open when the fire is Add extra fuel when necessary. Never add too much fuel.

It is best to fill the stove Always open the filling door slowly and for a short space of time. Before filling up, Check whether the coals are glowing enough just behind the log retainer, so that the added fuel will immediately Open stacking will make the logs burn very intensely, as the oxygen can easily reach This method of stacking is applied when burning wood for a Low intensity fires cause tar and Tar and creosote are highly comopen stacking Therefore it is necessary for the fire to regularly burn very intensely, so that thin layers of tar and creosote immediately disappear. Low intensity fires also cause tar to deposit on the stove panes and doors. When it is not too cold outside it is better to let the stove burn intensely for just a You need a coal basket for burning coal. After a few minutes, add some more coals until you can only see the glow of the previous When the fire basket or the cast iron plate fins are red hot, you are heating too intensely. If your fireplace is equipped with an ash tray optional, it Relatively speaking, burning wood produces little ash and it Stop fuelling the fire and let it burn out. You should let the fire burn out and keep an eye on it as long as it is still glowing. Attention! Mist and heavy fog will block the chimneys smoke outlet and may lead to smoke It is best not to use the fireplace under these weather conditions. It takes only little effort to keep your appliance in good condition. Regularly check whether the sealing cord still closes the doors tightly enough. Minor paint damage can be touched up with a can of spray paint. Your dealer can During the first use after repainting your unit might give off some slight odour. However, this will disappear quickly. The glass can be cleaned with a number of glass cleaning products available on the At the end of the heating season, seal off the chimney with a ball of paper. You can If necessary, replace the sealing ropes and use fire cement to fill up possible leaks.

Remove the fireplate for better and more thorough cleaning. To remove the doors, disassemble the hinges as shown. You should have your chimney swept by an expert before the heating season begins. It is useful to check the chimney for soot during the heating season as well. Checking and maintaining the chimney is a statutory requirement. When all of the above advice is heeded, you will be able to fully enjoy your stove. Flue gas temperature Minimum draught Bois. Holz. Kolen. Charbon. Coal. Kohlen Bois. Holz Brown coal.
