Everything found here is unclassified and won't compromise out national security. Some of the documents are old historical manuals from WWII and Vietnam, others are relatively recent. I particularly find the correspondence courses to be very useful. I may not need the armorer manual on a.50 machine gun, but a course on carpentry is pretty useful. Military Manuals cover every subject known to man except maybe ranching and prostitution. I think this is one of the most useful sections for preppers on my website. Background Over recent decades, the Danish armed forces have participated actively in international land, sea, and air operations. Awareness of Denmark's compliance with international law, including international humanitarian law, has become part of the daily business of the Danish Defence. The Manual was developed as an outcome of the Danish Defence Agreement for the period 20102014 which was supported by a broad spectrum of political parties in the Danish Parliament.

<http://dev.pb-adcon.de/node/17583>

The parties agreed that Denmark should have a military manual of its own, in order to further strengthen the Danish Defence's training in, and application of, international humanitarian law and

the law of armed conflict. The Manual provides Danish soldiers with a comprehensive perspective for better understanding their obligations under international law when participating in international operations. Moreover, the Manual includes important lessons learned from the Danish armed forces' participation in international operations over recent decades. The Manual provides, in addition to mission specific directives, a legal framework for the participation of the Danish Defence in international operations and, in particular, for preparing operational orders tailored to the specific international operation. This issue of Special Series provides a general subject index of the current periodic and serial publications of the Military Intelligence Division issued from 1 January 1944 through 1 June 1944. Issues of Intelligence Bulletin, Military Reports, Tactical and Technical Trends, and Special Series published during this period are covered. This volume is a supplement to Special Series No. 23, which indexed these publications from their date of first issue through 31 December 1943. [Share to Twitter](#) [Share to Facebook](#) [Share to Pinterest](#) The purpose of this study is to state and explain what is known about enemy theories of the use of chemical agents in battle and the methods of applying them so that we may understand his actions and anticipate his movements.

The tactical principles discussed and the technical processes described should not be mistaken for those of the United States Army, although many close similarities are apparent. It is not intended in the least to suggest methods of employing our own chemical warfare troops, except so far as knowledge of the enemy may contribute to effective counteraction. The study consists of a digest, with interpretations, of a great many writings of the enemy. Much of the material already has been published in isolated articles or given limited distribution in several forms. All information has been assembled here, however, and primarily focused upon the subject of tactics in chemical warfare. In addition, reports have been included of actual examples of the use of chemical warfare tactics by the enemy in the present war. Where such examples have been available these tend to confirm that the written tactical doctrine is generally followed in combat. A literal translation of foreign documents often gives wrong impressions to readers not acquainted with the language or practices of the originator. On the other hand, the use of the accepted terminology of our own Chemical Warfare Service would perhaps mislead the reader into the assumption that enemy techniques correspond more closely to our own than is the case. Therefore, enemy theory and practices have been stated as nearly as possible in those United States equivalents which convey the ideas, but do not necessarily represent the actual language either of enemy military writing or of the United States Army. In discussing chemical warfare it is not always possible to separate tactics from technique. In general tactics means the determination of the time and place for the use of chemical agents in conjunction with the employment of combat troops. Technique can be defined as the methods by which chemical agents are dispersed at the proper time upon the targets that tactical considerations have selected.

In many cases in chemical warfare, the two are so closely linked that it is necessary to understand the techniques used or available, to comprehend fully the tactics that may be used in a given situation. The diagrams and sketches, also, are taken from enemy publications. All have been redrawn for clarity and intelligibility. The Japanese tactical diagrams, however, are like nothing usually found in the military writings of western nations. They have been copied and clarified only as the requirements of reproduction demanded. Information presented in this book is believed to be complete and accurate according to sources available to 1 July 1944. Special Series No. 24, Enemy Tactics in Chemical Warfare, 1 September 1944. [Share to Twitter](#) [Share to Facebook](#) [Share to Pinterest](#) On the European Continent the proportion of rugged mountain terrain is comparatively small, but many of the most difficult masses have considerable strategic importance because they are national boundaries. The strategic significance of the European ranges is indicated in the map

on p. 2. In evaluating the significance of these mountains in its war plans, the German High Command followed two fundamental lines Mountain masses must be exploited as defensive barriers; in an offensive campaign they must be forced in order to reach and destroy the enemy in his own country. As a result of lessons learned by the German and Other European armies, the German High Command reached the conclusions that ruggedness of terrain is a critical factor, and that mountain operations require troops who are specially selected, trained, and equipped. It was believed, however, that the extent to which mountain troops should be employed is affected by the degree of steepness and rockiness and by the number of trails of the mountainous region in which operations are planned.

Consequently, the Germans may, when forming a task force, use ordinary troops with a small cadre of mountaineers in relatively easy mountain terrain, but in alpine regions they use mountain troops exclusively. Special Series No. 28, German Mountain Troops, December 1944. Share to Twitter Share to Facebook Share to Pinterest Up to the present time, since the beginning of World War 11, toxic gases have not been employed by the European Axis armies, but Japan has used such gases on a limited scale many times in China. However, in the field of chemical warfare, the employment of toxic gases represents only one phase of modern combat technique. The use of screening smokes, incendiaries, and flamethrowers has played an increasingly important role in the present conflict and may easily assume proportions never dreamed of in the last war. The value of smoke for screening purposes in military operations has been demonstrated repeatedly. Early in the war, with the aid of this weapon, the Germans were enabled to capture the strategic Fort Eben Emael in Belgium and to penetrate the heavily fortified French Maginot Line with relatively few casualties. Aided by protective smoke screens, large numbers of Axis troops were dropped by parachute on Crete. That smoke is invaluable in landing operations was demonstrated by the British in the Dieppe raid and by U. S. troops in North Africa. In addition, screening smokes are being utilized advantageously to obscure harbors, docks, and industrial areas when they are subjected to bombing attacks. Air raids upon London, Berlin, and other cities emphasize the importance of incendiary bombs. Especially when used together with aerial demolition bombs, these incendiaries have caused widespread destruction of built-up areas. The tactical value of the flamethrower against pill boxes and fixed emplacements is recognized. It is a particularly effective weapon when mounted on tanks.

Also, the terrifying effect of the flamethrower upon morale, when first encountered, cannot be overlooked. It is therefore proposed to present an estimate of the capabilities of the Axis powers to wage chemical warfare in its principal phases, and without special emphasis on toxic gases, which may or may not be encountered. Share to Twitter Share to Facebook Share to Pinterest The Japanese have made only limited use of tanks up to the present time. In their operations in China, however, they have had an opportunity to utilize tanks much more extensively than elsewhere because of the character of the terrain and the large areas over which the fighting has occurred. As a matter of fact, China has been the great proving ground for Japanese armoured vehicles of all types. The Japanese also used light and medium tanks to some extent in the Malayan campaign and in the siege of Singapore, as well as in the Philippines, Burma, Guadal canal, and Papua. More recently, on Guam and Tinian, comparatively large numbers of Japanese tanks have been in action; on Saipan more than 80 were destroyed, many by aerial and naval bombardment before they could be moved from assembly areas. 80 pages, illustrated. Special Series No. 26, Japanese Tanks and Tank Tactics, 1944. Share to Twitter Share to Facebook Share to Pinterest A salient feature of the organization of Japanese artillery prior to the outbreak of the present war was the absence of any adequate provision for the control of artillery by higher echelons.

Preponderant, indeed almost exclusive, employment of artillery in the role of a forward infantry support weapon justified, in the minds of Japanese staff officers, the allocation of small artillery units to infantry control, and a disproportionate number of independent artillery units. Even the absence of effective provisions for divisional control was justified under this concept. Within the past 2 years, however, both army artillery headquarters or artillery commands and group artillery headquarters have been identified. The army artillery headquarters has a total personnel of 110 and is commanded by a lieutenant general or major general. The commander exercises direct command over all artillery directly attached to the army, and provides for unified control of army and division artillery. The artillery group headquarters is commanded by a major general or colonel and includes a total personnel of 170 officers and enlisted men. This headquarters exercises control of all division artillery and ensures coordination 112 pages, illustrated. Special Series No. 25, Japanese Field Artillery, 15 October 1944. No tank, rocketpropelled grenade, or infantry battalion can match the guerrilla teams ability to exact brutality with precision, instill fear in enemy hearts, and viciously deflate morale. From the snows of Korea to the jungles of Southeast Asia to the mountains of Afghanistan, the U.S. Army has employed guerrilla tactics to deadly effect.

Those tactics and techniques, being used today by U.S. soldiers, are laid out in the U.S. Army Guerrilla Warfare Handbook. Topics covered include Offensive combat operations Interdiction Defensive operations Psychological operations in support of unconventional warfare Demobilization And more. Employing small, heavilyarmed, and welloiled fire teams, guerrilla warfare has played an invaluable role in the success of nearly every U.S. campaign for decades. Here, its methods are detailed raids and ambushes, demolition, counterintelligence, mining and sniping, psychological warfare, communications, and much more. Raymond 3.0 out of 5 stars It focuses more on gathering a force to fight and then supplying, assisting, and managing them. Which is what The Special Forces do. This is not a tactics book. This seems like a must for preppers. Its more about administration. Teaches you where to start your fight. I am very pleased with this purchase!

This book focuses much less on the tactical side of conducting unconventional warfare tactics and placing much emphasis on the organizational and technical side of it. That is to say, I was hoping that it would be oriented towards a junior leader audience TLPL but instead it focuses more on the operations level. For a book about guerrilla warfare it sure likes to go on and on about ethics though.
