The more precies your question is, the higher the chances of quickly receiving an answer from another user. You will automatically be sent an email to inform you when someone has reacted to your question. We recommend you to keep the routers manual on your computer in order to have an easy access to, it in case of a problem with Internet connection. You may find documents other than justWe keep our list of direct DLink DP301P driver and firmware links uptodate so they are easy to find when you need them. S h a r e Y o u r P r i n t e r o n a N e t w o r k However, you are not the only person having problems with keeping the operation manual of all household devices. Below are few guidelines regarding how and why you should collect the product manuals. Then, it will be much easier to find it than look through the purchase boxes which have already been thrown away by you or any other of household members. It will be enough to clear the drawer once in a year and throw away any manuals of the devices you do not use anymore. Thus, you can avoid storing any unnecessary documents and keep only those which are valid. To get to the router login page its necessary that you are connected to the router. The default password is blank. Sometimes the username and password doesnt work that we mentioned in the top of this guide.Can be found on a Did you try the following IPs In the list below we listed all known router IPs for the manufacturer Dlink. Maybe this will work for you.If you hold down this small button for approximately 20 seconds, you may have to use a toothpick, then your modem will get restored to the factory settings. What you need to keep in mind is that when you reset your modem, you will lose your connection online. It is therefore better to take an experts assistance in this regard.<http://cheumst.com/upload/fckeditor/compaq-contura-4-25-manual.xml>

Though it is possible to print to DLink network print servers from Windows 95, this capability is useful if primarily administer your network from UNIX systems, or if you want to print from workstations that are only accessible through IP routing. You can install the protocol from the Network control panel if necessary. 2. From the Start menu, choose the Settings submenu, then the Control Panel item within it. Windows will display the Control Panel folder. 3. Doubleclick on the Network icon in the Control Panel folder. 4. Click on the Add. button on the Configuration tab. 5. Windows will ask for the type of component to add. Select Client and click Add. Click OK to let Windows restart. To add a printer port, 1. From the Start menu, choose the Settings submenu, then the Control Panel item within it. It manages the flow of print files from your workstations or file servers to its connected printers, delivering print jobs to highperformance printers much faster than a file server or a PC acting as a print server can. The printer server is equipped with a highspeed parallel printer port, allowing you to share the latest generation of bidirectional laser printers, color ink jets and others. It plugs directly to the back of a parallel printer, which is shared among multiple users and no printer cable is required. The procedure is as follows. 1. To start the Add Printer Wizard, select Settings Printers from the Start menu and doubleclick on the Add Printer icon. 2. The Wizard asks you to select between Local printer and Network printer. Select Create a new port. The procedure is as follows. 1. To start the Add Printer Wizard, Go into Starta Go into Control Panela Printers and Faxes. Click on Add a printer. 2. The Add printer wizard should then come up. Click Next. 3. Select Local printer attached to this computer. An arbitrary Port name will be generated by default and this is based on the IP address specified.

In the LPR Settings section, set the Queue Name to the name of the port registered on the print server. Click on Finish to complete the wizard. 10. The Add printer Wizard will then start the installation of the Printer drivers. Please follow this wizard through and install the drivers for your printer accordingly. 11. The wizard will then ask for the name of your printer. Enter the appropriate name for your printer. 12. Choose whether you wish to share the printer with other network users and enter an appropriate name. Copyright DLink Europe Technical Support All trademarks acknowledged Page 8 13. The wizard will then ask for the Location and Comment. Select Yes to confirm it is printing correctly. Once done, click Next. 15. The wizard will confirm that you have successfully installed the printer. Click Finish to complete the installation. Please use the box above to search for any other information. Supporting multiple networkNetwork connection is through aNDS. This gives you the flexibility to install the printYou can sendIn addition, Windowsbased menudrivenSNMP and latest MIBII MIBs are built. Here are two solutions. If the first one does not work, try the second one. For example, if the MAC address is 000FAB03C1A7, the password will be "SYSC1A7" After logging in, you may save your configuration and decrypt the password with the method decribed below or just change the password and forget about this unfortunate event. Your only hope is to send the unit back to DLink

or buy a new one, sorry! I like to use XVI32 it's a freeware Download it from It has a maximum of 8 characters. Even if more characters were input in the web interface, only the first eight were kept. So if you have put a password of 9 characters or more and remember it, try putting only the first eight in the authentication windows, it may just work and you won't need to go further in this procedure. You catch the drift. If the password has 7 characters or less, the last character will be followed by 0xBE. So if you hit 0xBE, stop there, you're done. There are some gaps in the table below because I have not tried the whole ASCII table, but the most commonly used characters in English and French are there. This is not the same thing as a reboot. When you reboot something you are simply cycling the power to the device. When you reset something all the settings are restored to how they were straight from the factory. You may have trouble logging back into it if you don't know the defaults. Hopefully this guide will help you through some of this. To access the interface you need to know the print server's IP address. For the default IP address check out our Login Guide. If you have changed it and don't remember it don't panic. Use our free router detector software to locate it. Then in the left sidebar click Reset. The top one is simply a reboot. This is done by using the factory default IP Address.

Where do you find these. We have them for you in our Login Guide. Check out all our different guides for this print server at the bottom and top of this page. Sep 24 Oct 29 Our payment security system encrypts your information during transmission. We don't share your credit card details with thirdparty sellers, and we don't sell your information to others. To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. Please try again later. Amazon Customer 3.0 out of 5 stars I then had to tell Windows where to find the INF printer driver file on my hard drive. This is how I was able to finally get this device to work with Windows 8.1. The good news is that I got it to function. The bad news is that it wasn't particularly easy or straightforward. I knew I was in trouble when I opened the box and saw that the documentation was dated 2003 and was all for Windows XP. I guess that it never occurred to DLink that someone would want to use this gadget with a modern operating system. DLink can't be bothered to update its web site. I tried to follow the Win XP instructions, which included changing the IP address of my computer. That enabled me to see the DLink print server, but cut me off from the Internet. Not a good idea.

In a final act of desperation, I called DLink tech support, not expecting much. Then, a miracle occurred. In not too much time I actually got through to a real person who could speak English and who actually knew what she was talking about. If not, it's a mess. There were no instructions anywhere for using this with a Mac machine, but I managed to muddle through. So I wasted more time than I ever imagined but it at least everything works. DLink could have saved themselves some tech support time and could have saved me some aggravation if they had taken a few minutes to update their documentation to the 21st century. But I guess that's too much to ask. I'll certainly think twice before buying something from them again. It was up and running in less than 15 minutes. However, I am familiar with network protocols and addressing schemes, and I can see where those without such knowledge might have problems. The default IP address for this device is 192.168.0.1, and all computers on your network must share that IP scheme to use the printer connected to this print server. In my experience, most routers wireless or wired use a default IP address of 192.168.1.1, so the IP address for the print server will need to be changed. Note the next to last

number in the IP address is preset to zero; it must match that of the existing network in my example, the number 1. The included instructions guide you to accessing the print server device a few hoops to jump through but once you're there you can easily change the default IP address and you'll be able to access it directly in the future. Be sure to follow the directions exactly when creating the new printer port on your computer, particularly where you have to define the LPR Queue name. My network consists of WinXP and Win2000 machines. The thing has run like a champ and is the most economical solution for printing black and white in a home environment.

I thought I was going to have to let it go as our home network has grown and I no longer had a dedicated PC I could share it through on the network. This little gadget has just extended the lifetime of that printer. This has allowed me to connect the printer directly to the router and allowed me to share it without a dedicated PC. Set up was fairly easy. The help provided on line was necessary to get it to configure properly and set up each PC. Page 1 of 1 Start over Page 1 of 1 In order to navigate out of this carousel please use your heading shortcut key to navigate to the next or previous heading. Otherwise, we'll assume you're OK with our use of cookies. This device lets you cost effectively share your parallel printer with a group of users at home or in the office. Supporting multiple network operating systems, this device brings a high level of flexibility and performance to your printing needs. Select the attributes you require, then click the button below. How can I see similar products. The 3 LEDs it has are lighted up, and as the manual says it's a DRAM problem. Is there a solution and any chance to reload the firmware based on the MAC address? Site recommended not working. Printer always offline. Firmware and other software not healing.. Anyone help us. Login to post. Please let me know the default IP address for configuration. Now I upgraded all PCs to Windows 7 and I can't get the print server working again. What is the solution. Michel Blezer Site recommended not working. Firmware and other software not healing.. Anyone help us. It happens sometimes that the print server loses the printer. Alex www.CAS411.com Router is reconfigured and working, but DLink device is not. LAN Manager, IBM LAN Server, AppleTalk, Mac OS, EtherTalk, Windows based setup and administration software, PS Admin, is supplied with the print server, making configuration and management quick and easy. The print server also supports configuration and management via the Telnet protocol for networks without Windows compatible machines. External Features The PS Admin software. Once a printer is connected to the print server, the Printer Status will be displayed. Server Name The name assigned to the print server. Model The model of the print server. Hardware Version The version of the hardware on the print server. Firmware Version The version of the firmware and release date on the print server. MAC Address The MAC address of the Ethernet port. Click Save on the bottom of the configuration page to ensure the settings are updated and saved. Location Input a comment indicating where the print server is located. optional Admin Contact The name of the print server's administrator. optional Password By default the DP 301P. Help. Click on the link in the window to access DLink's support website. Please check the website regularly for product and firmware updates. DLink DP. You will need this information later in the configuration process. Deselect Automatically detect and install my Plug and Play printer. Click Next. Click Next. If the desired printer is not on the list, click Have Disk and insert the printer driver disk that came with your printer to install the printer drivers. At this screen, you can input a name for the printer. Click Next. Highlight the printer, as shown. If the desired printer is not on the list, click Have Disk and insert the printer driver disk that came with your printer to install the printer drivers. Click Next. If the desired printer is not on the list, click Have Disk and insert the printer driver disk that. Click Finish. Note Mac OS printing is supported by PostScript printers only.

With Mac OS X you can use AppleTalk or LPR printers using IP protocols for printing through print

servers. Follow the instructions below to set up the print server. After attaching the print server to your network using the directions provided in the Quick Installation Guide, change the IP address. We decided to try and figure out what was causing the issue, so we did packet traces and sniffed the wire. Once we had the trace we found the events right before the jetdirect card dies. It turns out to be a single packet that causes it. Kind of odd, but its a DHCP NAK that is telling a computer not even directed at the printer that it cannot have the IP its requesting and must get a new one. Please try again. Please try again. Learn more here Please try your search again later. You can edit your question or post anyway. To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. It also analyses reviews to verify trustworthiness. I then had to tell Windows where to find the INF printer driver file on my hard drive. The help provided on line was necessary to get it to configure properly and set up each PC. All rights reserved. Trademarks or registered trademarks are the property of their respective holders. Software and specifications subject to change without notice. Next, make sure that the Printer is turned OFF. For Mac OS printing, please refer to the manual located on the CDROM. IP address can be assigned manually or automatically by DHCP, BOOTP or RARP. To access the print server s web configuration, manually assign an IP address on one of the PC s on your network to the same subnet as the print server. Select Use the following IP address IP address Subnet mask Click OK 3 4 Click OK to apply IP address settings. The following instructions use the print server s default IP address as an example. Write down on a piece of paper the Port name that you wish to use.

Please make sure to deselect Automatically detect and install my Plug and Play printer. This may take a few seconds Select Custom Then click on Settings. Click Settings Select LPR Input the port name of the port being used by the printer Click OK 7 8 Click Finish In this window, scroll down to find your printer. If it is not listed, insert the driver CD or diskette that came with your printer. Click on Have Disk. Then, scroll down and highlight the printer. 8 9 At this screen, you can input a name for this printer. Select Yes to print a test page Your Setup is Complete. The printer is now ready for printing with Windows XP, on your network. Click Finish 9 10 Technical Support You can find software updates and user documentation on the DLink website.
