Equipped with a combined integrated analog NTSC and digital ATSC tuner to receive DTV offair terrestrial signals and Clear QAM unscrambled digital cable channels. This unit can receive and decode all 18 ATSC digital television formats. All broadcasters are scheduled to switch to DTV broadcasts by February 2009. Indoor antennas like rabbit ears or bowtie types should work if you are near the broadcast tower. But you will need a proper outdoor antenna if you are located 3040 miles from the tower. Antenna height and an unobstructed line of sight affect signal reception. Buildings, steeples, towers, and other structures taller than four stories within four blocks of your location can mask or deflect signals. Superior to DVI because HDMI benefits include uncompressed video bandwidth of up to 5 gigabytes per second, one connector instead of several cables and connectors, and communication between the video source and Digital TV. Superior to both composite and Svideo because it delivers a quality picture with greater resolution, better color accuracy, and less color bleeding. The Component and SVideo Input Jacks are perfect for connecting a DVD player, DSS, or SuperVHS VCR. Connect a stereo system to the Audio Output Jacks for improved sound. Other Info, Audio, Caption and Pix Shape keys allow immediate access to these functions and settings. On Auto your controls are automatically adjusted for the best viewing and listening. Manual adjustments are always possible. A third track allows you to hear alternative secondary audio programs SAP if
