A large display enables the easy identification of the measured values. The simple 3button operation

and an easy to use menu ensure intuitive operation. The visible menu makes selecting and performing other functions quick and simple. INTELLIGENT SENSORS The precalibrated electrochemical sensors, and the catalytic sensor are automatically recognized and provide precise and reliable measuring results. A convenient pump adaptor makes it easy to switch between pump and diffusion mode. USEFUL SOFTWARE FUNCTIONS A life signal assures full functionality of the instrument without a visual check by the operator. When using a defined gas mixture, the instrument can be calibrated by pressing a single button. There are different charging options, including a car charger, to meet your specific requirements. DATA LOGGER OPTION Drager Xam 3000 can be fitted with a data logger which records gas concentrations and alarms up to 30,000 sets of values. CALIBRATION EQUIPMENT Easy to use, fast and professional in performance from a bump test to the complete documentation, Drager offers practice oriented solutions which ensure safety for each application. The automatic test and calibration system Drager ECal. A functional instrument must include a power supply unit and as an optional addendum a third and fourth sensor or the data logger can be ordered. Prices are indicative only and may vary by country, with changes to the cost of raw materials and exchange rates. It's constantly improving and developing. Both file upload and download are very convenient. Very convenient unlike the other sites, no popup windows or redundant pics. Their ergonomic design, mobile phone dimensions and light weight make them the perfect companion in your daily work.

Reliable measurement technology, long sensor life and easy operation guarantee maximum safety at an extremely low cost of ownership. The instrument's light weight and mobile phone. This 1 to 5 gas detector reliably measures combustible gases and vapors as well as oxygen and harmful concentrations of CO, H₂S, CO₂, Cl₂, HCN, NH₃, NO₂, PH₃, SO₂ and organic vapors. Simply attach the pump adapter and hose and you're ready to measure gases in a confined space. The multiple gas measurement and internal pump capabilities make this unit an ideal. Prices are indicative only and may vary by country, with changes to the cost of raw materials and exchange rates. Picked one up

for pennies on eBay although of course with the usual proviso of it being untested and not having a charger. Looks like it can take AA battery pack, although these of course cost silly money despite just being a bit of plastic. Likewise the main and car charger cradles cost silly money. The back of the unit has two exposed terminals and suggests max 12v 1.275A charger. Shall I just whack a bog standard 12V 1A adapter against the terminals and see what happens then I have one of these and had it for years. It is a very tough monitor as long as you dont get the sensors wet. Rain all day is ok but dont submerge. Sensors can be replaced but not cheap, and one is extremely expensive the flam sensor I think. The spring clip on the back is not the strongest as I found out Best to use the loop to tie it onto you or if you need a rope to lower it down a shaft etc. If the self test says that it is out of calibration dont waste money getting it tested. There is no calibration as such, its just a calendar that counts down a warning to generate cash. O2 sensor out of range. If it works ok and you need a charger then I may be able to lay my hands on one. PM me when you know either way Crime doesnt stand a chance. Can get to it Monday if you havent sussed it by then. Im sure that it would be polarity protected.

Shouldnt harm it. I would probably risk it, the ammeter will tell you if you have them the right way around Crime doesnt stand a chance. Lit up, played a little tune and the battery charging symbol started flashing. Think I might have just saved 165 Reasoning with these people can be difficult. On hearing how dodgy my explorations sounded and that I might be putting myself at risk, one of the local rescue chaps donated a 4 gas meter with a blown O2 sensor. I decided that I would get a sensor, the software, some calibration gas and do it myself and the regional sales chap was in total disagreement. He wasnt having any of it and that was the end of it. It didnt matter that I had post grad experience of setting up analytical chemistry machinery from first principles, or actually taught other people to. My Microclip one was about 45. Calibration gas is about 85. An oxygen sensor yours is separate. those neotronics ones arent and are about 300 are about 70 a shot. Contrary to popular belief, they are very very very simple to repair and calibrate. I do suspect that you may run into problems with having to get stuff for it, which may be pricey. I will be buying a cylinder of gas and doing it myself. If anyone has one of these, I will calibrate it for a small fee. BW wanted 40 to just see my unit. Unreal. In my estimation and experience with various detectors, BW come in top for what a mine explorer with an eye on the budget and a bit of cando needs. If people are pooing themselves because some nutter is going into a mine with a fully working 4gas meter, pray to god they dont find out about all the people who dont have one at all. Sadly, I think mine has worked out about 20 a trip so far. I have only taken in on about 4 trips. Sadly, I think mine has worked out about 20 a trip so far. I have only taken in on about 4 trips. Well, if it gets you out of a pickle just once its worth every penny.

Was using old flaky the other weekend and saw the oxygen drop from 21% to 13% just by climbing over one collapse. That was totally genuine as my lungs concurred, but I suspect the 200% explosive gas it was reading at the time was wrong. It may help. . Give them a ring. They are very competitive and friendly. As you go increasing the CH4, you go lowering the O2 which pinches the EL points and makes the peak less serious. Landfill sites and shafts which have had oil slung down them interfere with your flammables sensor and make it haywire IMO. Worth asking. After attaching my charger Powered up and seems to be 100% working. Oxygen sensor responding when breathed on, CO and LEL alarms triggered by the gas cooker. Dont have a handy household source of H2S though. After the curry we had last night we might be able to help you out there. Crime doesnt stand a chance. Ive got a four gas QraeII that was due to get its first calibration a few months ago, but Ive still been using it underground. Someone flashed a dodgy old Peugeot 306D up in Killifreth carpark the other day and the gas meter almost laid an egg! Having said that I would get it done every year, after all I like to think my life is worth 50 of anybodys money. . Give them a ring. They are very competitive and friendly.
