This toolandattachments set lets you carve, grind, polish, trim, sand, and cut a variety of different materials, as well as shape, sharpen, clean, remove grout, smooth, drill, rout, sculpt, engrave, and strip. The 400 Series XPR Rotary Tool can handle cutting, grinding, sanding, polishing, routing, drilling, and carving. View larger. Compact, Variable Speed Design Compact and lightweight at only 18.8 ounces, the XPR rotary tool provides variable speed from 5,000 to 35,000 RPM for better control, whether youre working with soft woods, hard woods, metal, beads, PVC, or stones. And because the speed selector switch is in a different location than the power switch, you can easily keep track of the last speed you usedmaking it a snap to immediately pick up where you left off. The tool also boasts a permanent magnet motor that gets the job done while maintaining a consistent level of speed and power. Attachments for Exceptional Versatility This sets key benefit is the versatility and efficiency of several different tools in one convenient, moneysaving package. First, the Multisaw attachment powers through both wood and plastic, and makes either straight or curved cuts guickly and easily. Flex Shaft and Flex Light for HardtoReach Areas A flex light powered by included lithium ion batteries gives you a clearer view of intricate materials or pieces, making it an ideal attachment for everything from creating or shaping jewelry or fine collectibles, to assembling dollhouse furniture and miniature cars. Another great option for this type of detailed work is the flex shaft attachment, which allows you to get into tight corners and hardtoreach areas, such as under sinks, behind toilets, and in your car. Additionally, a selection of sanding discs and bands help with furniture or toy restoration projects, and a polishing wheel with compound and cone tip is great for buffing delicate pieces.

Whats in the Box 400 Series XPR variable speed rotary tool, six attachments, and 90 accessories. Click here for the detailed list. A hard shell case keeps your tool, attachments, and accessories safe and organized. View larger. Exclusive XPR attachments take advantage of the increased strength of the XPRs unique motor design plus it works will all existing Dremel attachments and accessories. To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. Please try again later. Croppled1 Top Contributor Mountain Biking 4.0 out of 5 stars My Dremels had been taken in a break in and those kits were no longer available to be replaced so this was about the same price as one. I bought it. I will just go over the important things to me. First this will use all the old tools however there are four different collets and it only comes with one. You will have to do some work after you buy this to get more accessories. They are priced reasonable. It would of been better if they truely had a monstor kit with a lithium cordless and and everything you could even want. You must not use this to do woodwork where a regular jig saw or ciricular saw would work. This is for finish work. You can fix one or two pieces of tile but its not a Fein if thats what you want buy that. For me with regular hand tools and this I can build some nice little bird feeders, adjust trim around the house. If your longing for just the old days buy the lithium cordless kit. If your making models with light duty that just need a occasional light duty cut this is ok otherwise I can see it would heat up and fry. You have been warned now in several reveiws. If you want a Fein buy that tool if you want a old school dremel thats a little heavier duty bulky too Then buy this.

I did cut the corners out of 1 inch pine paneling with it for cabinet work but it was very hot. I should of used a regular jig saw. Hope this helps. Oh and the planer will get you that extra sixteenth off a door but its the same thing one at a time and cool the tool for 10 minutes a few times a door. This is

not for working people just around the house with time on a day off. Restful work as you call it. Oh and I can see how the instructions are overwhelming. Calm down use common sense and you can find them online and adjust the print to make it easier on us old with old eyes and hands to use. When using this tool the rule is if you have to force it to cut your in over its head and its going to heat up and fry. RPMs are your friend. Oh and dont forget the break in 5 minutes on high no load out of the box first. It is wellmade, it does have a lot of cool attachments that in theory work great. The case is cool that it holds everything. If youre getting a Dremel, I still recommend this large set. My complaint is that every time I get it out, it takes a while to put everything together, and then I end up either abandoning the tool for another, or I have to change my original plan. You can assume Im an idiot that doesnt know how to use tools and neg this review if you want, but I assure you thats not the case at all. Its just that I always feel like this is the least impressive of all my tools. It should be a mini version of everything, but it ends up not quite working the way I want it to for anything. If you have some hobby related to very small things all the time, you may end up liking this tool. For me, I certainly dont mind having it around, but I barely ever resort to it.For someone who is going to use this tool kit for their hobby job such as small engraving work, grinding and polishing small parts like metal accessory, this is more than enough tool to have. You can do whatever you want with the parts already included in the kit.

For someone who wants to use this kit for their home improvement job, the strength of the tool is far far less than the ability you would like to have. So. please try to buy regular sized tools. I bought this kit to repair plastic fairing of my motorcycle which was broken by laying down on the ground. Trim out broken area, sanding off dings and scratches, grind epoxy bumps out, and polish the glued lines were done very smoothly and I was really satisfied with this tool kit. I could do the job as I wanted although it took twice as much time as I expected to spend on it. Now I have regular sized tool kits too, but I still use this tool in many times even for somewhat medium duty works as long as the job is like making one circle hall or cutting a couple of guarter inch bolt out. Benefits of using this tool is it has everything and packed in one small box. You can easily pull out the tool you want, use it, and put it back very quickly. However, this tool kit is definately not a tool for drilling hundreds of halls or ripping 4x8 quarter inch plywood unless you want to see smoke coming out of motor unit. Buyers need to wait until this item go for price cut of 25% or more, otherwise there are better products out on the market which are same type of tool as this with cheaper price tag. Even if a cheap crappy tool may break down within a month, spending as less money as they can is better idea for the buyrs who uses this kind of tools a couple of times a year for small light jobs. In order to navigate out of this carousel please use your heading shortcut key to navigate to the next or previous heading. He graduated with a BS from Utah Valley University in April 2003. Even the arts and crafts enthusiast will have a great time using this tool while being able to accomplish tasks that would be more difficult with other tools. The Dremel 400 XPR is designed to accept any Dremel attachment, including the Work Station, the Routing attachment, and the Flex Shaft attachment.

There are also two XPR attachments designed to be used exclusively with the Dremel 400 XPR the XPR Planer and the XPR Multisaw. These exclusive attachments harness the power and performance of the Dremel 400 XPR to provide results where other tools cant. For example, to sharpen an axe, use an aluminum oxide grinding stone; to cut a galvanized plumbing pipe, use a reinforced cutoff wheel; to cut a hole in drywall, use a drywall cutting bit. There is an attachment for just about every task. Using the recommended cutting speed will help the tool do its job the way it was designed to do it. Note Polishing, buffing, and wire brushing should be done at slower speeds below 15,000 RPMs. Wood cutting, drilling, carving, etc.Allow the performance of the tool do the work. Do not force the tool if it is not performing the way you think it should. Use a different accessory or speed setting to complete the task. Unplug the tool and blow the dust off of the tool. If you have an air compressor, use it to blow the dust off of the tool and out of the vents. Wipe the tool down with a

damp cloth rag, and then store the tool in its tool case. Be sure to lock the lid! Replace the motor brushes regularly as needed.
