To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. Please try again later. M. Oliver 4.0 out of 5 stars The software interface on it is very good for recording, the screen is easy to read. The batteries will last quite a while, or you can use AC optional, or Lithium Ion batteries optional. You do not need any add on MICs to record most events the MIC can be set to pick up nearly everything; to cut low end noise, etc. In short, this is a very high quality, easy to use but powerful if you need it dedicated audio recorder. The issues are that it only records in WMA format Windows proprietary and the software is not very good for editing. For example, if you record in stereo, it will not download the WAV file when you download the file, nor can you convert it to mono. To do the podcast, I had to import the WMA file into iTunes, then open the Mp3 iTunes created in Audacity audacity.sourceforge.net. From there, I was able to edit the file, and compress the bit stream. This device can also be used to listen to podcasts, and the software has some kind of organization for that; but for the life of me, I cannot imagine anyone doing this, if they had an ipod. It is just clumsy and not intuitive for podcast listening. If you want to listen to podcasts, do what the rest of the planet does get an ipod, use iTunes. I would recommend this device as a high quality dedicated recorder, that is not too expensive, but not for mp3 or podcast listening. This is the third recorder of this style that I have owned. The first was a microcassette unit and latter an Olympus Digital VN1000. Although both are still in working condition the DS30 is far superior in quality of sound and of course the speed of transfer of recorded sound to my PC for storage and additional applications.

While my previous recorders had to be audio cabled to my PC and then transferred or recorded in real time, the DS30 transfers by a USB cable and the software which is provided. The process is simple and I had no issues the first time I went through the process. I accomplish editing of the files by using the software that came with the DS30 to simply export the file to a folder on the PC. I use the DS30 for 3 basic applications. I receive a lot of voice mail, typically about 200 messages a week, and these messages are long and detailed, about 35 minutes in length. When I review the messages I need the detail and need to be able to stop and start and often transcribe. The voicemail package is not designed for easy stop and go or editing. So while retrieving the voicemail messages I leave the recorder by the speaker phone and transcribe as fast as I can. Then I can play back, stop and start with ease using the DS30 later. Messages that need to be retained can be moved to the PC and archived. Second big application is for interviewing. I am a writer and it is so much better to have the audio recording of the interview to work with. Although I take a lot of paper notes, knowing that the recorder is going allows me to get more detail. The recorder gets all the words and the background sounds that I may actually miss while interviewing. I get down on paper all the facial expressions, ambience of the location and details to refer back to, and of course great quotes after all writers write. Finally, I keep it with me at all times. Even my trusty Franklin Planner hasnt yet learned to open itself and take notes while I drive. In dictate mode did I mention the DS30 can adjust the recording sensitivity from lecture to conference to dictation I can make audio notes of ideas while Im driving or recording locations and address information when it is not safe or convenient to stop the car and make notes.

If you havent had a similar style recorder the experience will seem forced at first. If you adapt to it you will soon find that you cant imagine not having it with you. I cant address the battery life yet as I have been using the DS30 actively for about three weeks and still the batteries are fine. My first

concern with the unit was that it seemed fragile for the way I use it. I looked for a cover of some type for it with no success. Yet to my surprise after three weeks of active use there is not so much as a scratch on the unit. I am very pleased with the DS30's performance, price, quality and dependability. Right out of the package I could figure out how to use every function of this recorder including using the software without touching the instructions. It doesn't do much, so it doesn't take much to figure out. Pick your folders, record, playback, transfer, organize. The Olympus DVR is nicely built, very small and lightweight like a fancy PEZ dispenser. Sound quality is superb for a portable recorder. Comes with a stereo mic that plugs in on top that can be detached; or use the built-in mono mic, making it even smaller. I found the mono mic had much better sound for voice pickup since the stereo picks up too much ambient sounds. Plus, smaller file size. You can plug in pretty much any mic with a minijack camera mics, lavaliers, phone headsets, etc. The sound is great because the headset mic is right next to my mouth and I can hear playback in my ear. I do a lot of extended driving and come up with most of my ideas on the road, so this is really useful. Disclaimer I don't recommend operating any device while driving. There is a mic sensitivity adjustment switch that works wonders when applying it to the correct recording situation. The program is basically only useful for saving, organizing and playback of your files. If you plan to do more, like edit or convert files for other uses, you need to use other programs more suited for your needs.

If you are just getting started, it is easy to do for FREE with the internet and a few Google searches. You'll be surprised what you can do for free with a little research. Overall, an excellent little recorder that actually exceeded my expectations, especially for this price range. Highly recommend. We use this for recording parts of our podcast, and thought it was worth dedicating a page of our site to discussing this recorder, for the benefit of anyone thinking of buying one. It also has a built-in mono mic and can accept other mics via the 3.5mm mic socket. It also has a built-in speaker as well as a stereo headphone socket. Here are some alternatives At the top quality stereo setting, this holds over 6 hours of audio, and we've used this regularly for FrequencyCast, our TV and Tech podcast. We tend to find that using the built-in mono mic gives us better results than the stereo mic when recording a single voice for our podcast, and for the really high quality stuff, we've used an external mic plugged in via the 3.5mm socket.

For those technically minded, the audio files are recorded using the wma2 codec. You can also use it at an MP3 player. One little gimmick is that the thing speaks at you menu commands and basic functions can be audible as well as visual. I understand that the recorder saves audio in WMV format. The recorder connects via USB and you can extract audio recordings without requiring any third party software. The DS30 records in the WMA Windows Media Audio format though, which can't be played on a Mac. A quick Google search reveals that the Mac app EasyWMA can be used to convert these to a Mac-friendly format though. We've been asked for help tracking down an online manual for the DS30. If you need help with a specific feature on the DS30 and have lost your manual, feel free to contact us, and we'll tell you what's in our manual. Also, if you know where to find a version online, let us know. Otherwise, the good news is that there are several WMA to MP3 converters around free ones include Koyote and Switch. Press REC again to restart recording. You can't pause for more than two hours. Once you've stopped a recording as opposed to pausing, you can't add to a recorded file on the DS30. There isn't a minutes and seconds display of battery life remaining, so we advise that if you want to make sure that the batteries don't run out, you insert a new set of Alkaline batteries before recording. Battery life is quoted at approx 20 hours in XQ quality for alkaline batteries. Alternatively, you can power the DS30 with an AC mains power adapter. To let you judge the quality, we've recorded a short test. This is a Windows Media Audio WMA extracted from the DS30 using the built-in mic. We've used the highest quality setting 128kbps, 16bit, stereo, 44.1kHz. Olympus DS30 WMA Test recording. Also, we answered this question in Show 42 of our

podcast, where we recorded the answer using the DS30. To set the speed, make sure no audio is playing, then hold down the Menu button for one second.

Then, scroll to the Play Menu and select Play speed. Also note that when you have audio playing, if you press the Play button for a second time, playback switches to slow play if you're in this mode, just press Play again till you're back to normal speed. Is the DS30 the answer if you're looking for something that can be used as a professional audio recorder no compression, stereo mics, line in, adjustable recording controls, etc, then consider the Olympus LS10 or the newer Olympus LS11. See our Olympus recorders review for a podcast, spec and audio samples of these two top-end recorders. We use the Olympus DS30 for some of our features. Wherever you are, simply connect the scanner to your laptop using the included USB cable, no external power required. Easily scan receipts, ID cards, credit cards, and other important papers and never have to worry about losing crucial data. Additionally, the DS30 provides a scantocloud service so you can easily save your scanned documents to a supported cloud storage service. Many DVRs allow you to add to the end of a recording or overwrite from a particular point in the recording. This Olympus model does not each time you stop recording you have no option but to create a new file. However, if you upgrade your DSS Player software to the Plus version, you will have the ability to split and join files. The join feature will allow you to create a single file from multiple. The split feature could be used to remove a section of a recording that you don't want by splitting the file into two. Another option is to use audio editing software such as Audacity to edit your files but there are several reasons why upgrading to the Plus version of DSS Player might be better. Second, you won't have to learn a new application though there are instructions for using Audacity with JAWS. Third, Audacity doesn't accept the WMA file format used by the Olympus unless you download and install the FFmpeg library so you have an additional step in using another program to perform that conversion.

So I recommended that my client continue to use her Olympus recorder because at the time it was the only model with the voice output feature, upgrade to the Plus version of DSS Player and learn how to use the join and split features in that software. The actual Open Box product may differ in packaging and included accessories, but has been tested to ensure basic functionality. The software can filter out the background noise and make the audio sound very clean. Very good quality of recording and easy to use, the price was right too. Newegg you ROCK!! We used it for our church and our pastor sounds loud and clear in the recorded wmv files. Background noises are readily filtered out and you can set desired threshold to detect voices. Highly recommend this. Maybe not directly recording to MP3 files. But wmv just fine. It has performed well in large auditoriums. The sound quality is second to none. It can record in several different modes allowing a good balance of quality and size of the file. Doesn't have a USB direct interface, must use a USB cord included. Ideal for on the go recordings and light weight, yet solid construction. Yet to test out the audio fidelity of various environments, but previous reviews attest to the quality of the recordings, so I assume and look forward to a pleasant experience with this Voice Recorder!
