0 out of 5 stars Obviously, its not going to compete with cameras like the D850 or the 5D Mk iv, but you can still take great photos with this camera. For the nerds ISO management is great, you can still get semi usable photos all the way out to 25600 24.3 mp Sensor is crazy sharp Still shoots raw No, this camera doesnt have creature comforts like touch screen and a tilting LCD, but its lightweight and Very good for all kinds of shooting. I can legitimately recommend this camera for literally anyone.The 1855mm lens is what you would expect from a kit lens and has VR vibration reduction, the Nikon version of image stabilization. The 70300mm is great for when you need more reach and is fast focusing. Nikon sells a VR version of the 70300mm lens, however, they included a nonVR version in this package. That is disappointing, as the image stabilization would be helpful at

longer zooms at slower shutter speeds. I plan to use this lens primarily for outdoor sports with faster shutter speeds, so it wont make much of a difference for me, but it would be nice to have the VR for indoor or low light outdoor situations. Also, Nikon has added software to this camera so it will not function with 3rd party batteries installed. I learned this the hard way and will be sending back the 3rd party batteries I purchased. However, Ive been told that there are new 3rd party batteries that have found a way around this. Im waiting for mine to arrive to confirm this. Ive attached some sample images I took from both lenses on the D3400 from a trip to the zoos Festival of Lights. I used the 70300mm for most of the outdoor animals while the sun was up, then switched to the 1855mm for indoor animals and to take pictures of the lights using a monopod once the sun went down.I've had mine for almost a year now and wanted to get a lot of use out of it before I wrote a review.

First off, there's a lot of people saying the D3400 is a "downgrade" compared to the D3300, and they don't have a clue what they're talking about. One of their complaints is a weaker flash. As you learn more about photography, you'll learn that onboard camera flash ON ANY CAMERA is garbage and not desirable anyway for good quality photos and portraits. And it's also not true that you can't remotely take pictures with the D3400. You just have to use a wireless remote which works perfectly fine, or use the 210 delay timer. And no, it doesn't have WiFi, but Bluetooth instead that uses Nikon's SnapBridge app to receive JPEG on your phone which works fine, if all you want to do is upload to Facebook, Instagram, etc, which compresses your images anyway. So basically, Nikon got rid of all of the garbage on the D3300 YOU DON'T NEED, which gives you much better battery life, 500 shots on the D3300 vs 1200 shots on the D3400. Who in their right mind wouldn't want that. This is a fantastic entry level camera that is capable of taking some AMAZING photos. This camera fit my budget perfectly when I was shopping for one, and I got the bundle with the camera bag and two kit lenses, the 70300mm and 1855mm, which are fantastic for kit lenses btw, and give you a lot of versatility for just starting out. You will want to upgrade lenses at some point and invest in some quality prime lenses to get even better pictures. If I had to do it all over again with the budget I had at the time of purchase, I definitely would. And all the self proclaimed experts on here who say this camera isn't as good as the D3300 are just flat out wrong and don't know what they're talking about. Also, some are saying snapbridge doesn't work with IPhone. I was using an iPhone 6S Plus, just upgraded to and 8S plus and haven't had any issues with either phone. Works fine IPhone.I primarily use this for the different events that my school hosts Sports, Drama, Conventions, etc.

Ive read a few articles about how too and which lenses are going to be the best but really those are unnecessary, you really can just open this up and start shooting clear pictures Ive been using my camera on my phone and after getting this I cant ever go back. Its great for all those action shots that you never could have made before hockey, basketball, etc all really nice photos.Its cheap, its light, comfortable to carry it outdoor. The battery lasts long, convenient wireless transmission. If you dont shoot wildlife or sports, dont think about other APSC but this. 11 focal points are absolutely enough for nonsports shooting. I know everybody who loves photography has a fullframe dream. However, the truth is, only few of us can afford that price, and many of those few they dont insist to taking photos. I love this camera, it writes down every drop of my life.Camera bag, memory card, battery all things are proper. Camera bag is not fake.Bluetooth is not working. Camera is good. lenses are good. The advantage of digital imaging technology is greater flexibility and accuracy through omnidirectional scanning of multiple bar code types and its ability to read both onedimensional 1D and twodimensional 2D codes quickly and accurately. The charge coupled device CCD image sensor provides superior data capture for any type of bar code you encounter in industrial applications 1D, 2D, even damaged or poorly printed bar codes. And, the rugged housing ensures reliability in even the harshest environments. The website says The website says Im looking to set up a portion of a DS3400 with SAS for virtualisation, and a portion for SATA file serving, I cannot afford 100% SAS. Is this possible sorry, disk arrays dont normally support fc and sata in the same shelf but im really not sure about this one.I finally found this But tread carefully, there may be a performance penalty from mixing drives with very different perforamnce characteristics in the same shelf. What virtualization solution were you looking at.This unit will support direct FC connections with upto 4 hosts. We already have an IBM bladecenter so the thinking was that the FC switch will be cheaper if its integrated into the bladecenter. I doubt if dual FC switches will be possible on our budget, but the direct connection may work in emergency. Virtualisation is undecided, we have experience with free vmware on linux, we will also look at Citrix Xen, ESX and maybe free redhat Xen. The usual tossup between paying for good hardware vs paying for software. You will probably have to rule ESX out with direct attached. How did you configure the SAN. Specifically I d like to know how must the SANs drives be exposed to the 2 nodes. If you are getting SATA drives get the dual port variety if you can as they are faster.All rights reserved.
