Among the many features available, is the ability to adjust the volume for each individual speaker; however, there is only one shortcoming I cannot get a good compromise to allow center channel dialog clarity. I am extremely disappointed with the Yamaha RXZ11 product; because, one of their best features, included in their Product Reviews, indicated that this unit would be capable of "Firmware Upgrades". Hi Sorry to hear you are having a problem with the Yamaha RXZ11 receiver.

Getting the right balance across the speakers can be difficult and the ideal settings will vary between different rooms and different users. A couple of thoughts 1. Did you run the YPAO automatic room setup Page 46 of the manual. This will often give you a good basic balance in the room and you can then tweak the settings manually to suit your taste. 2. Have you tried limiting the dynamic range page 103 of the manual. This should have a similar effect to volume leveling. 3. Fixing issues with EQ is not usually the best way to go but boosting the mid frequencies of the center speaker may help try around 4 to 7 kHz. The parametric EQ is more flexible than a graphic. The Q setting sets the width on either side of the frequency you are targeting. This is often more accurate than the builtin system. You can buy something like this Galaxy Audio CM130 Sound Pressure Level Meter, and follow this guide to setting your speaker system with an SPL meter. All the best. Paul Site Editor Feel free to join in this discussion by adding your own comments below. I did some adjusting of the dynamic range; but, I really am not too familiar with its effect. Ill have to play with this, to get a feel as to what settings might improve the dialog. This helped improve the dialog somewhat; but, it is still not the ideal setting. I will try your suggestions, regarding the Parametric Equalizer; I really appreciate you giving me suggested settings. It also has a Parametric Equalizer that has been a little beyond my comprehension I guess I havent tried too hard to figure it out. I have about 10,000 LPs and 8,000 45s in my collection of all Genre. Ill be back in touch, to let you know how I make out. I have done some searching, to find out how to use a Parametric Equalizer; and, most of the information just explains what it is. Do you know any sites, that might explain in detail how to use it. Often the best way is to play with it and hear what it is doing. All the best.

Paul Do you have any advice pertaining to this final setup screen. Dont you just select Param and edit the band, frequency and q from there. All the best. Paul I am close, but not quite there yet; I have to get the Center Channel to set the Treble a little higher, and the Bass a slight bit lower; would it be possible for you to give me a slightly different setting for the Parametric Equalizer Also, the amplifier and speakers you have will also contribute to the sound in the room. We all have different tastes and ears too. Did you ever try the SPL meter I suggested in my first reply. You might be surprised how setting the correct levels with an SPL meter can really help getting the right balance in the room. You may not even need any EQ once you get this right. Also, make sure your subwoofer isnt too loud. Excessive bass from your sub can often distract from the rest of the soundtrack. Hope that helps. Paul He has worked as a sound, lighting and audiovisual engineer for around 20 years. At home, he has spent more time than is probably healthy installing, configuring, testing, derigging, fixing, tweaking, reinstalling again and sometimes using various pieces of hifi and home cinema equipment.
