We are aware that plenty of people do have warped vinyl records that they wish they could repair and still enjoy.Wired posted a wiki inspired instruction manual on how to repair warped records using two sheets of glass. We were a little skeptical at first, and wish well not really that we could try this out at home too. It seems pretty easy and if all goes well, you should be able to listen to that record again. Today I saw a new local listing of a Dual 721 for sale. I went by and the turntable is in full working order and in great condition so I purchased. The cartridge is a Shure V15 III LW with a Super Track Plus needle DN 352. I'm wondering if anyone has any tips about the ideal tracking force and anti-skating settings. It still has the crappy stock cables, which I plan to replace. Any recommendations for that, are greatly appreciated. Low impedance cable is what is called for, but I'm not sure if I should leave it to the repair guy or bring in some cables to install. I'm sure the table will need a lubricant check, and hopefully the tech will check the headshell and tonearm, even though it works flawlessly. Currently it has a 1980s Signet MR 5.

I'm new to this turntable but have some experience with Thorens. The table seems to be working fine but hasn't been used for some time. Are there some servicing steps I should take such as oiling similar to the Thorens. Also it's likely I need a replacement needle. I guess the alternative is a JICO which will cost more than I paid for the turntable. Any tips. Do not put lubes anywhere else than where indicated on the lube chart. It's in great condition and everything is working fine. I'm really happy. I wanted to ask what I can expect from sound-wise from this vintage turntable. My main turntable is a Rega Planar 3 with an Exakt needle. I have read that I should invest in a JICO needle for my Dual 721 Shure V15 III LW cart. Should I go for the JICO VN35 or the VN35 E SAS. Is it really worth spending as much on the needle as I have just spent on the turntable. With a JICO installed will this be comparable to the Rega. No issues with shielding either. The plastic cable holder would not accommodate a thicker cable. Also Mogami W2947 was recommended by a Mogami engineer years ago as the best solution of their cables for use with a turntable. The arm return mechanism should be cleaned and regreased. Clean the pitch control with contact cleaner. No dextoxit unless you want speed instability in the near future. No service needed on the motor, never have anyone disassemble it as the tolerances are extremely tight, and any dust particles getting in there will destroy the bearing.

As part of a tune up, not a bad idea to replace the xenon strobe lamp. could bypass this detail. And have the tech check all the electrolytic caps for any signs of swelling or physical leakage. The Signet cartridge you have is better than the M97XE. I would search for a stylus replacement. Click to expand. The 721 is a rather collectible and relatively expensive turntable, which should be referred to a service tech. Even then, the Dual can be a challenge, any Dual. I opened the unit up and found the pimple was covered in old dried lubricant. As was the plastic tone arm VTA adjustment. I cleaned both with iso alc 99% and put a small amount of vaseline on the plastic of the VTA. All seems to be working now. Flushed with success I wondered if I should lubricate other areas of the player as this turntable hasn't been used in some time. However it seems to be working fine so I'll leave well alone. Thanks.
