### Book Descriptions:

We have made it easy for you to find a PDF Ebooks without any digging. And by having access to our ebooks online or by storing it on your computer, you have convenient answers with Duracell Battery Charger Cef15Nc Manual . To get started finding Duracell Battery Charger Cef15Nc Manual , you are right to find our website which has a comprehensive collection of manuals listed.

Our library is the biggest of these that have literally hundreds of thousands of different products represented.

## Book Descriptions:

# Duracell Battery Charger Cef15Nc Manual

We are committed to doing everything we can to ship your package as soon as possible. For more information please visit our FAQ page below. COVID FAQs See specs for product details. This guarantee does not apply to damage from misuse or abuse beyond normal usage. This guarantee gives you specific legal rights, and you may also have other rights which vary from state to state. Should any battery be damaged by this charger due to defects in the charger arising from faulty materials or workmanship, DURACELL will repair or replace at our option the battery, provided both charger and battery usage instructions have been followed. Send charger with the battery to DURACELL, Berkshire Corporate Park, Bethel, CT U.S.A 06801 Attention Consumer Relations Department. If yes, remove and reinsert the NiMH batteries. If batteries become heated, they may be damaged. Insert new NiMH batteries. TO CHARGE BATTERIES 1. Insert DURACELL NiMH batteries into the charging slots. Alternatively, plug in a car adapter 12V CL. Use only the stock adapter provided by DURACELL. 4. The LED indicator will light up RED. 5. If abnormal conditions are detected during charging, the charger channel will stop charging and corresponding LED will flash red. 6. The individual LED indicators will turn GREEN when the batteries become fully charged. 7. Once charging is complete, unplug the charger from the power source and remove the batteries. 8. Charging time may vary based on battery capacity mAh. 9. Batteries that are new or have been stored for an extended period of time may need to be charged and used 23 times before optimal charge performance is achieved. Safety protections will prevent battery from overcharging. Used rechargeable batteries may be recycled at no cost to the consumer through the retail collection sites maintained by the Rechargeable Battery Recycling Corporation [www.rbrc.org](http://www.rbrc.org) If you would like additional information on Duracell Rechargeable Batteries call 18005512355 900AM500PM E.S.T.. <http://dralituncer.com/userfiles/dead-space-ps3-manual-pdf.xml>

CAUTION We recommend charging DURACELL NiMH rechargeable batteries only. Do not attempt to charge nonrechargeable batteries. Misuse could cause batteries to rupture, causing personal injury or damage. Indoor use only. Dry location use only. Risk of electric shock. Never disassemble or alter any part of the charger or batteries. Charger or batteries may become hot during charging and will cool down when charging is complete. Not recommended for use by children. Do not expose to rain or snow. 8. Do not place in or near water or extreme heat. 9. Do not operate charger with damaged cord or plug. 10. Do not operate charger if it has been severely damaged in any way. 11. Do not disassemble charger. 12. Disassembly may result in a risk of electric shock or fire. 13. To reduce the risk of electric shock, unplug the charger from the outlet when not in use. 14. This appliance is not intended for use by persons including children with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety. Children should be supervised to ensure that they do not play with the appliance. 15. For connection to a supply not in the U.S.A, use an attachment plug adapter of the proper configuration. 16. This power unit is intended to be correctly oriented in a vertical or floor mount position. T ableau de recharge Capacite des piles Duree de recharge 2650 mAh 1 heure 2000 mAh 1 heure 1700 mAh 1 heure 1000 mAh 1 heure 800 mAh 1 heure Pour recharger 2 ou 4 piles AA ou AAA, positionner les piles ainsi T ableau de positionnement Maintenant vendu a vec des piles rechargeables prechargees Duracell Maintient sa charge jusqu'a 365 jours sans utilisation, contrairement aux autres piles rechargeables Compact et portatif, dans la voiture comme a la maison Dispositifs et commandes de securite GARANTIE DE QUALITE DURACELL offre une garantie limitee de trois ans contre tout defaut de materiau ou de fabrication et garantit le rendement de tout chargeur DURACELL pendant une periode de trois ans a compter de la date d'achat. Si ce chargeur DURACELL s'avere defectueux, il sera remplace sans frais des qu'il aura ete retourné a DURACELL Composez le numero sans frais pour les directives de retours. La presente garantie ne s'applique pas aux dommages decoulant d'un mauvais usage ou d'un usage abusif non conforme aux conditions normales d'utilisation. La presente garantie vous accorde des droits particuliers reconnus par la loi et il se peut que vous disposiez d'autres droits qui peuvent etre differents d'un Etat ou d'une province a l'autre. En cas de dommage cause a une pile par ce chargeur du a un defaut de materiau ou de fabrication, DURACELL reparera ou remplacera la pile, a sa discretion, a condition que les consignes d'utilisation du chargeur et de la pile aient ete suivies. Pour en savoir plus sur les piles rechargeables de Duracell, composez le 18005512355 de 9 h a 17 h HNE. Si tel est le cas, retirer et reinsérer les piles NiMH. Si la pile est chaude, elle pourrait etre endommagée. Insérer une nouvelle pile NiMH. POUR RECHARGER LES PILES 1. Insérer des piles NiMH DURACELL dans les canaux de charge. Autrement, brancher le chargeur dans un adaptateur pour voiture adaptateur pour allumecigarette de 12V. N'utiliser que l'adaptateur fourni par DURACELL. 4.

Le voyant DEL deviendra ROUGE. 5. Si le chargeur detecte des conditions anormales lors de la recharge, il s'arrêtera et le voyant DEL rouge clignotera. 6. Les voyants DEL individuels passeront au VERT lorsque les piles seront complètement rechargees. 7. Une fois la recharge des piles terminée, débrancher le chargeur de sa source d'alimentation et retirer les piles. 8. La durée de recharge peut varier selon la capacité des piles mAh. 9. Les piles neuves ou conservees pendant une longue periode doivent par fois etre rechargees et utilisees 2 ou 3 fois avant d'atteindre leur charge optimale. Des dispositifs de securite empechent de surcharger les piles. MISE EN GARDE Il est recommande de ne recharger que des piles rechargeables NiMH DURACELL. Ne pas tenter de recharger des piles non rechargeables. Un mauvais usage pourrait entrainer l'eclatement des piles et causer des blessures ou des dommages materiels. Utiliser ce chargeur a l'interieur seulement. Utiliser dans un endroit sec seulement. Risque de choc électrique. Ne jamais demonter ni modifier aucune partie du chargeur ou des piles. Les piles ou le chargeur pourraient devenir chauds pendant la recharge mais refroidiront une fois la charge terminée. Utilisation deconseillee aux enfants. Ne pas exposer a la pluie ou a la neige. 8. Ne pas immerger ou placer pres de l'eau ni pres d'une source de chaleur extreme. 9. N'utiliser pas le chargeur si la fiche ou le fil est endommagé. 10. Ne pas utiliser le chargeur s'il a subi des dommages importants de quelque facon que ce soit. 11. Ne pas demonter le chargeur. 12. Le demontage pourrait causer un risque de choc électrique ou d'incendie. 13. Pour reduire le risque de choc électrique, débrancher le chargeur entre les utilisations. 14.

L'utilisation de cet appareil est contreindiquée chez les personnes dont des enfants aux capacités physiques, sensorielles ou mentales reduites ou encore ayant peu d'experience ou de connaissances, a moins que la personne responsable de leur securite les supervise ou leur fournisse des directives d'utilisation. If you are here, it was rather the case. However, you are not the only person having problems with keeping the operation manual of all household devices. Below are few guidelines regarding how and why you should collect the product manuals. However, we believe that the manuals should include the most important and needed information about Duracell CEF15NC, not to discourage the user to read. Obviously, if a device Duracell CEF15NC has multiple advanced

functions, we will not avoid a high amount of information in this document. Then, it will be much easier to find it than look through the purchase boxes which have already been thrown away by you or any other of household members. It will be enough to clear the drawer once in a year and throw away any manuals of the devices you do not use anymore. Thus, you can avoid storing any unnecessary documents and keep only those which are valid. You can also download and print the manual Duracell CEF15NC to place it in your drawer. She holds a Bachelor of Arts in English from the University of Nevada, Las Vegas. She enjoys writing home and garden topics and considers herself an expert on doityourself home improvement topics. In order to be recharged, the batteries must be removed from the electronic device they are powering, placed in the battery recharger and then connected to an electrical power source. Once the batteries are recharged, they can be placed in any electronic device that uses AA or AAA batteries, such as digital cameras and toys. The prongs fold in so they lay flat against the charger when its not in use. The red LED light on the charger will appear, indicating that the battery is charging.

If the LED light is flashing, there is a malfunction and the batteries arent charging. The charging process can take anywhere from 15 minutes to two hours, depending on how many batteries are being recharged, the battery cell capacity, the condition of the batteries and the temperature. To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. See All Buying Options Add to Wish List Disabling it will result in some disabled or missing features. You can still see all customer reviews for the product. But it does what it promises, which is charge batteries in a short time. A carrying case would have been nice, too. But CAUTION current rechargeable batteries deliver 1.2 volts, not 1.5 volts like a nonrechargeable battery. For many applications its not significant but note that you are NOT getting full power from these units. Please try again later. From the United StatesBut it does what it promises, which is charge batteries in a short time. A carrying case would have been nice, too.Please try again later. Please try again later. D. B. Smith 3.0 out of 5 stars But CAUTION current rechargeable batteries deliver 1.2 volts, not 1.5 volts like a nonrechargeable battery. For many applications its not significant but note that you are NOT getting full power from these units.Please try again later. Please try again later. Ben 1.0 out of 5 stars This is the worst 40 dollars I ever spent on a product. Just after couple months of use I got so sick and tired of this charger that I went and bought a 20 dollars Sony charger and couldnt be happier. I you want a great charger that happens to be much cheaper, buy Sony. I bought Duracell charger because I figured its kind of expensive, it must be a good charger, what a mistake.

Full charge on a battery never lasted me for more than couple days of use. I went back to using Duracells alkalines because they lasted much longer and performed much better than these rechargeables.It does recharge batteries, but the recharged batteries never last half as much as Duracells own cheap alkalines. I bought Sony charger, they last longer and perform much better. Meaning they charge up my camera much faster than Duracells.Please try again later. Please try again later. Chris L. 5.0 out of 5 stars Found this unit and decided to give it a try. Comes with 6 AAs and 2 AAAs, so they get you started right off with a few batteries to use, which is nice. Unpacked everything the plastic package is difficult to open up, so be careful and plugged it in. There is a cooling fan built in which moves air across the batteries during charging, so just make sure you dont rest the charger where the airflow is blocked e.g. on carpet. Within the stated 15 minutes, the batteries were done and tested out at 1.2 volts on my voltmeter. Put the batteries in my flash and took several dozen pictures that night without any problems. Have yet to really give them an extreme durability test, but overall seems like its working fine so far. The light will turn on, then start flashing indicating that there is a problem and that the batteries are not charging. Out of 4 existing older NiMH batteries I own, only 2 of them can be charged by this charger. I suspect that

brand new batteries will not have this problem. It charged my old batteries also within 15 minutes, and these old batts tested out at 1.2 volts again with my voltmeter. The package does not indicate this requirement, either. I did note that other competing chargers on the market will only give you 15 min charge times if you use special IC3 batteries. Not so with this charger, in my experience so far.

Nowhere on the package does it tell you what input voltages the charger supports, so I flipped it over and read the label on the unit. It requires 100 to 120 volt input, so if you plan on using this overseas, you should bring along a voltage converter with you. US voltage input only. The unit is a little bulky, so if you are going on vacation, you'll probably have to pack it in your luggage, not in your camera case my existing 14 hour overnight charger is small enough to be toted in my camera case today. It comes with a cable to plug into a wall socket or an adapter for car use. The instructions do say that if you charge batteries from a car, it will take longer than 15 minutes. I have not tried this yet and don't know exactly how long it will take. Overall, I am happy with the purchase and would recommend this unit to anyone looking to turn AA charge times around quickly, particularly any professional photographers who use these in their external flash units. Dec 2006 I forgot to add something. With this unit, you can charge from 1 to 4 batteries at a time, your choice. The moment you pop in 1 battery, assuming the units plugged into the wall or your car, it'll start charging. Very flexible! As a followup, have used it several times now with good results, still very happy with this charger. March 2011 Well, here we are, nearly 5 years after I wrote my initial review. I just wanted to pop back in here and mention that the original Duracell batteries that shipped with this product have pretty much given up their lifespan after nearly 5 years of good service, I feel I definitely got my moneys worth out of these batteries. They no longer charge in the fast charger, but they outperformed some other generic NiMH batteries I bought around the same time to use in my flash unit. These Duracell batteries have been all around the globe with me since my initial purchase, and I am overall very pleased with how they worked out.

I've also since tested this 15 minute fast charger with Sanyo Eneloop batteries and have had great luck with these, too. Please try again later. Please try again later. Anna 3.0 out of 5 stars I'm a procrastinator, so I found it difficult to plan 14 hours in advance to use the regular charger that came with my old batteries. I was very excited to see that this charger does, indeed, take merely 15 minutes to charge. Batteries that I charged and then saved for a day or so to use later were completely dead by the time I put them in my camera. This happened to both my older batteries and the batteries that came with this charger. The longer I used this charger, the less powerful my batteries became. My friend had been using my charger occasionally, too, and he discovered his batteries were also losing power. We considered that maybe the charger was just wearing out, but when we tried charging the same batteries using his 12hour charger, it was of no use. So, while this charger is very convenient for travel and lastminute charging, don't burn your batteries out on it. I suggest you alternate it with a less powerful charger for longer battery life. Please try again later. I began using the precharged batteries in my Wii controllers, since the charger would not charge them further. The wiimotes registered the batteries as having a half charge, and when they died, the charger refused to charge them. It seems the intelligence Duracell put into this charger is completely insane. It tells me that dead batteries are charged, and refuses to charge them. Since it took me awhile to go thru all 8 batteries, I am outside of Best Buys 30 day warranty. I have no idea how anything this bad got through any kind of quality assurance process. A coworker was able to charge the batteries to maximum charge in a normal slow Sony charger that came with her digital camera. Although I still have a faulty charger, I do appreciate their gesture. Please try again later. Please try again later. J.

Vasiliauskas 4.0 out of 5 stars I am planning to travel to Europe and it was important to me that the charger would be compatible with 220V. Duracell website clearly states that voltage converter is not

required as all Duracell chargers have voltage input rating of 100240V. To my biggest surprise, after opening the package, the power plug for the adapter has the voltage rating of 100120V. I knew Energizer charger was rated for only 100120V voltage input, but I went with Duracell because of the worldwide voltage compatibility. Before returning this charger to the store, however, I have decided to call Duracell customer service line listed on their website. The customer service representative apparently knew exactly what I was talking about. According to the Duracell customer service representative, these 15 minute Duracell chargers were intended for the sale in the USA only thus the reason for the label on the power adapter 100120V, but, according to her, it is compatible with 220V voltage input as well. I was told not to worry and use it with 220V it is safe. I guess I will just have to trust Duracell and try it out when I am in Europe. I would really hate blowing up anything Hope this helps the others as well. Please try again later. Please try again later. Chris Rioux 1.0 out of 5 stars A few months ago August 2007, I noticed that I would charge ALL of the batteries, and not use them for a week, then when I went to use them, they were practically DEAD. Even as soon as they are done charging now they probably only charge to 60 percent capacity, and die very quickly. I couldnt believe it. I have had great success with NiHM batteries in the past, but this is ridiculous. I spent hours online, researching battery technology and chargers to find out that any charger that charges your batteries faster than one our SEVERELY DECREASES THE LIFESPAN of your batteries.

I purchased a set of Eneloop batteries which hold a charge much longer than any other NiMH batteries on the market. I will be contacting Duracell to find out if I can get replacement batteries for the small fortune I have lost on these. Dont get me wrong, its not the batteries that have the problem. Duracell makes great batteries. Its their pathetic charger that killed them all. Unfortunately, people review these products and give them five star ratings without owning them for more than a few months. I know someone else who had the same exact problem with the Energizer version of this 15 minute charger. DO NOT BUY. Please try again later. Please try again later. Marc Xiong 1.0 out of 5 stars Gosh!! SURE IT CHARGES FAST. Please try again later. Please try again later. Christopher K. Seid 1.0 out of 5 stars From the horror stories i read here. i think i might need to get a nonduracell charger to charge my batteries if they still work. Bad buy. would next consider buying the Sanyo brand precharged batteries that my friends are raving about. Please try again later. Please try again later. Login to post Is there a site with a printable manual. Or can you email it to me in a printable format Please take time to rate me Hope it helps. Please let us know how you get on If it is not already installed on your computer, download it free from Please note that the above manual is nonprintable. If you need a printable version of the manual, you can download it from here You will have to provide the serial number to download the printable manual. Hope this solves your problem. Thanks for using FixYa. They often have service manuals that the public has given away. You will need a case splitter to sepatrate the engine center cases. I do not recommend a rubber mallet. Be sure to install new crankshaft seals. Why are they a problem to the earth and things that are wrong with them and not good for the environment. I this ok Answer questions, earn points and help others.

Re Duracell cef14nc nimh battery charger Not sure if it was the exact same one, but I had a duracell charger that charged in pairs — not good, only used it once, batteries got hot and I stopped using it. Discuss Duracell CEF14NC — battery charger — AA — NiMH x 4 Sign in to comment. Be respectful, keep it civil and stay on topic. The old model is black and shaped like a

sea shell, with batteries in slightly fanning out positions. The new one is gray and more rectangular. It offers several improvements over the previous version. Find helpful customer reviews and review ratings for Duracell CEF90NC 30 Minute Charger with 4 AA NiMH Rechargeable Batteries at Amazon.com. Read honest and unbiased product reviews from our users. The list of user's manuals Sanyo plasma tv owner's manual Air force survival manual 64436 Delta 366020 vs kobalt kt1015 manual C1800 nordic track manual Manual 5c collet closer plans. Sometimes when I switch on the charger the two red lights which normally how steady red when charging and change to green when fully charged flash on and off. Even when I change the batteries around, one or both red lights flash rather than showing a steady red. A flashing red LED light indicates that the charger detects abnormal batteries or the battery temperature is abnormal. When the light is a solid green, the batteries have completed their charge.

kiloran I plead guilty for not trying to google the solution. I am puzzled about the reference to faulty batteries because this is occurring with Duracell batteries that are new or little used. I greatly appreciate your very prompt and helpful reply. Jon It is I understand possible that when the least charged cell discharges, the remaining cells, through their continuing to force current through the discharged cell, impose a reverse voltage polarity on it. If you then stick said cell in an intelligent charger it could conceivably detect this state and issue a warning. We humans often gather up cells and bung them in things with no thought for the relative state of charge of the individual cells. This can lead AIUI to such effects. The trick is to charge them all to a similar state before use together. Regards, Chris Ill try runing them all down which doesnt take long with a digital pocket radio. and see what happens. ATB Jon I can only offer profuse apologies for wasting good folks time. Its no excuse, but I am not a shopper. ATB Jon I can only offer profuse apologies for wasting good folks time. Its no excuse, but I am not a shopper. ATB Jon Oops! No problem Jon, it created a discussion and we learned something from Chris. All knowledge is good! kiloran. Disclaimer Sedo maintains no relationship with third party advertisers. Reference to any specific service or trade mark is not controlled by Sedo nor does it constitute or imply its association, endorsement or recommendation. To start viewing messages, Someone told us we needed extended life batteries and so we went out and bought the Duracell 15 minute rechargeable kit at Target. When I got home I put the 4 x 2400mah batteries into the charger and the red light came on and the fan turned on. I was expecting the red light and fan to turn off after 15 minutes, but it continued for about 60 minutes and then the red light turned off fan continued.

Would appreciate any definitive comments, especially from someone who had similar results with their CEF15NC. And if the batteries did take a long time when charging for the first time, did they take 15 minutes to charge after that. Or do I have to return this kit as nonfunctioning. We hope not because it was a long bit of traveling. Thank you. I normally do that and cycle them on other chargers first. It may just be because they are new. Id suggest just using them in your camera and watch them on the next charge. If they take 60 minutes again, you may have a problem. Actually these 15 minutes are rated at that fast time with lower capacity cells, so 15 minutes for 2400mAh cells is a bit of BS. You should wait till at least the cooling fan stops too. Oh, yes it does require a few cycles to reach full capacity. After the red light went out, the fan was still running. When we removed the 4 batteries, a second or two later the fan stopped. This is the first time we have ever had a charger or MAH rechargeable batteries and so, we are completely unaware of what might be going on, or why it took so long for the initial charge. Thank you. First question Did the batteries get hot. I would use the batteries and recharge them 23 times. You should end up with charging times in the 15-20 minute range. If you dont, take it back. I might also add that you may want to set the charger on a noncombustible surface and monitor the charge. You can touch the batteries from time to time. If they approach the temperature of a baked potato 140 F shut things down and let things cool off. Most batteries dont die they are tortured to near death, then murdered. When i first got my Energizer 15 min charger it only took 15 min to charge 2000mAh cells and i was worried that that

was too fast What i found out was the current was appropriate, and not the value stamped on the charger base so all is well.

If, on the other hand, it took 60 minutes to charge i think i would discharge the cells by using them in a flashlight and then measure the charge current. I would then calculate the required time to charge knowing this charge current and the rating of the cells. Since it is 60 mins and not 15 that is quite a difference so i would expect to see a much lower current than is needed to do the job in a real 15 minutes. If this was the case, i would take the unit back. I dont know if you are equipped to measure current though.are you Almost forgot to mention It is normal on the E15 for the fan to run after the cells are done charging.this is apparently to cool the cells down after that fast charge. I leave my cells in for a time after the charge because they get nice and cool with that fan running on them.Got Light As we mentioned, we are completely new to this and very confused at this point. We dont know the first thing about measuring current, etc. If we remember, the batteries got a bit warm at the end, but that is all we remember happening.Image resizer by SevenSkins.
