After just a short time, you will realize how many of your daily tasks will be simplified by using the label printer. With a little imagination, you will think of hundreds of ways to use the label printer to make your job easier and more efficient. This User Guide provides instructions for DYMO When labels are used for shortterm applications envelopes, packages, and so on, fading is not a problem. When labels are used to label files in a file cabinet, fading is very gradual over many years. Labels applied to the edge of a notebook that is then placed on a shelf in the sun will show signs of fading within a few months. To prolong label life when not in use, keep the labels stored in a cool, dry place and inTo choose a label file 1 Select the arrow next to the Label Files dropdown list. A list of the most recently used label files appears. Click here to display the list of recently used labels. If necessary, click More to access all the predesigned labels. Notice that all label files are listed with the label type first, then any important objects on the label, and finally the The Graphic Settings dialog box appears. 2 Select File under Select Graphics Source. The Insert Image button changes to read Select File. 3 Click Select File. The File open dialog box appears listing the contents of the default Clipart folder. 4 Select the Miscellaneous folder and click Open. The contents of the Miscellaneous folder appear. 5 Select Comput1.bmp from the Miscellaneous folder. A previTo enter a return address 1 Click the text in the label's upperright corner. The flashing cursor appears where the default text had been. Flashing cursor 2 Enter the following text COMPUTEK EUROPE B.V. Max Euwelaan 104 3046 MA ROTTERDAM The Netherlands 3 Click anywhere outside the text object. The new return address appears on the

label.<http://triplesrule.com/userfiles/developing-a-policy-and-procedure-manual.xml>

Changing the Recipient Address Next, you enter a recipient's address Elsbeth Meijjer Airportplein 7 NL3045 AP ROTTERDAM The Netherlands Elsbeth Meijjer's address now appears as the recipient's address on the label. Changing the Font You may want to modify the font used for the recipient address or return address. To change the font 1 Click the recipient address object. The address text is highlighted. 2 Select Times New Roman from the Font dropdown list. 3 Select from the Formatting toolbar. The recipient address Saved labels will automatically appear in the Label Files dropdown list. To save the label 1 Click on the Main toolbar. The Save File dialog box appears. 2 Enter MyShip as the new name for the file and click Save. Notice that your new label file, MyShip, is added to the top of the Label Files dropdown list as the most recently used label and also alphabetically in the list oYou can also modify any of the predesigned label files included with the software. The Designer allows you to change the appearance and content of labels. You can add or modify text including addresses, barcodes, sequential numbers, datetime stamps, lines, rectangles, and circles or ellipses Macintosh. The following figures are examples of Address objects can also display POSTNET barcodes. You can change the font settings font, size, style, and so on for text in address objects and control the text's position. You can also apply special effects to the text. Address objects are by default variable text objects. Address objects can also be fixeSee the online Help for more information about the barcode symbologies supported. Counter The counter object automaticallyThe Open File dialog box appears. 2 Select the file you wish to open and click Open. The label opens in the label workspace. Adding an Object When you place a new object on a label, the new object displays certain default settings. For example, new address and text objects display text describing how to modify the objects.

Although the various types of objects are different, the steps for placing the objects on a label are nearAdditionally, if you have Mac OS version 10.2 or later, you can print labels using the addresses already stored in your Mac OS address book. You can also use the builtin Address Book to store information other than addresses. This information for example, a list of product numbers or video titles can be linked to a variable textYou can display or hide the panel using the Address Book button on the Action bar. To display the Address Book Click or select Open from the Address Book menu. The last list file that was opened appears in the Address Book panel of the Main window. The first time you open the Address Book, the Sample List entries appear. Notice the currently selected list entry is a. Wayne Fogel 5.0 out of 5 stars I

did not realize how much I used and relied upon this little machine until the motor decided to die. Suddenly I am hand writing file labels, package address labels, etc. Not only does my output lack the professional touch, it is taking me longer to do the work I need to get done. This little jewel prints file labels, address labels, postage, name badges and so much more. It provides full zip plus four addresses using the Post Offices data base and then puts the appropriate bar code on your labels thereby improving your packages probability of getting there. Just buy one and you will never regret it. I was a bit nervous about ordering one after reading some comments about how it had problems with Windows XP using a USB cable. However, I saw positive write up also so I ordered one. The instructions are very clear about the proper sequence to set it up with Win XP using a USB cable. I had no problem with it and I suspect those who had problems did not follow the proper sequence. I did not try the other option for a connection serial cable. I am very please with the unit. Now if I can just find some time to get my files organized with new labels I opted for the nonTurbo model as speed wasnt a necessity for me, plus it saved a few bucks. Within 15 min. I had it hooked up, software installed, and printing. The print quality excellent.

Software installation was painless Win98SE and XP Pro, as is changing the labels when switching between the various sizes this printer is capable of handling. I installed via the serial port since I didnt have a vacant USB port. The package includes everything youll need to get started, including both a USB and serial cable, and a sample package of large labels. I found a couple of bonus features that prove to be useful. First you can share this printer over a network simply by configuration and installing the software on the other computers. Overall, Im very pleased with my LabelWriter 330 and would recommend it to others shopping for this type of product. The software stopped working when I upgraded to Panther, but then another revision took care of that a few weeks later. At first the software was just klunky with OS X, running in classic mode only, and frequently working only after reboot. Then, when I upgraded to OS X 10.2.3, the labelwriter stopped working entirely. The drivers for thirdparty applications under OS X also dont seem to work at all I can eject a blank label, but thats it. Dymo has been promising new OS X software for months, but meanwhile Ive got a boat anchor. I really want to like this gadget. I had grown to depend on it. This printer, I learn quickly, cannot be plugged into the Hub and be recognized by the computer. The printer will not print when requested to do it. I bought two new, different brands of hubs, at others direction. All failed. Foolish me. When I direct connect the printer to my Computers USB port, it works. Then I remove it, insert it back into the Hub, and insert the hubs connector back into the computer. The printer continues to accept print commands and will print labels. But there remains a surprise. The iMACDV will not reboot. Only by removing the printer from the hub will booting be restored. Just ducky.

After all of this, how could I ever consider buying one of these Since the various locations, which use them, are spread all over the US reliability is extremely important to me. So far I have not experienced any problems. The printer works great with Microsoft Access applications and the print quality is superb. I probably wouldnt recommend it as a gadget for home use I couldnt see a need for it, but for professional use this is a great printer. In order to navigate out of this carousel please use your heading shortcut key to navigate to the next or previous heading. Please do not connect the Dymo printer to the computer until asked to do so in the software installation. After a few seconds, the installation The Run dialog box. If you are printing small PDF labels via your web browser, select your browser from the links below to view the recommended solution. Follow the steps below to check for these potential printer problems. The Cleaning Card and its instructions are included with your printer. Feed the label writer cleaning card through the printer 23 times to correct this problem. The cleaning card and its instructions are included with your printer. The following steps are for Windows PCs Rightclick the printer icon. A driver installation window should open when you first connect the printer to your computer. Follow the onscreen instructions to install the printer

driver. A driver installation window should automatically open. Click the Plus button at the bottom of the Printers list to select and reset your printer. If you are still unable to print, we would recommend reaching out to Dymo support, or your computer manufacturer for further support. Learn how to print to PDF when ConnectEasy is enabled. It's our intent that this guide helps step through solutions. Please let us know in the comments below if these steps helped. Also, tell us about any DYMO problem you encounter that you could not solve with this guide. Thanks!

I had to take the printer apart to get rid of the jam. I reassembled the printer and now it claims that the paper is empty. I have a full roll of paper on the tray. Any advice it flashes at me saying it's out of paper, but it still advanced the paper when you press the middle button. Advice Dymo typically recommends reseating your label spool using the steps in their user guide. Although it cuts off the top of our labels leaving out the weight and our company name. Is there a way to fix this. I have gone through settings and could not seem to find a way for it to print the whole label. I see that there is some extra empty space at the bottom. You can use the Dymo User Guide linked below for help with that. It is like it is not plugged in, which it is. This happened once before and I do not remember what I did to get it working. Advice Thanks! If it does not, I recommend reaching out to the printer manufacturer, Dymo directly. Here is their contact us page. Below outlines some of the most common reasons. If the following steps do not resolve your errors and you are a Patterson customer, please call support. If it doesn't, continue to step 2.
